GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

BEPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 1st MAY 1883.

GENERAL REMARKS.—Rain has fallen more or less throughout the Madras Presidency; standing crops are reported in good condition and the harvest outturn is generally fair.

In the Bombay Presidency heavy rain is again reported from the Southern Mahratta Country; preparations for kharif has begun in some districts; scarcity of drinking-water still continues in parts of Dharwar. In the Bengal Presidency the rainfall has been general throughout the Province; it has been very beneficial for standing crops and has greatly facilitated the cultivation of autumn crops. Considerable damage is reported to have been caused to the mango crop by the hail and high wind of the past week. In the North-Western Provinces and Oudh there has been slight rain in two districts; districts of the Punjab; the harvest is reported to have been good. Slight rain is also reported from four districts of the Punjab; the harvest is well in hand and a good outturn is expected.

There has been no rain in the Central Provinces, but prospects are good; winnowing is in probeen good rain in all districts; and preparations for kharif sowings have begun in places. In Assam there has been good rain in all districts; paddy is being cut in one district and ploughing and sowings are in progress. In Mysore and Coorg there has been rain in all districts and standing crops are in good condition. In the Nizam's territories preparations for kharif still continue. In the Central India States and Raiputana prospects continue generally good. and Rajputana prospects continue generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House, Simla, on Thursday, the 3rd May, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., presiding.

His Excellency the Commander-in-Chief, G.C.B., C.I.E.

Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.

Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.

The Hon'ble C. P. Ilbert, C.I.E.

The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.

The Hon'ble T. C. Hope, c.s.i., c.i.E.

The Hon'ble W. W. Hunter, LL.D., C.I.E.

The Hon'ble J. W. Quinton.

SUCCESSION CERTIFICATE BILL.

Major the Hon'ble E. Baring moved that the Bill to amend the law relating to certificates granted under Act XXVII of 1860 (An Act for facilitating the collection of debts on successions and for the security of parties paying debts to the representatives of deceased persons) be referred to a Select Committee consisting of the Hon'ble Mr. Ilbert, the Hon'ble Sir Steuart Bayley, the Hon'ble Mr. Hope and the Mover.

The Motion was put and agreed to.

Major the Hon'ble E. Baring also moved that the Bill and Statement of Objects and Reasons be published in the local official Gazettes in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

BENGAL TENANCY BILL.

The Hon'ble SIR STEUART BAYLEY moved that the Hon'ble Mr. Gibbon be added to the Select Committee on the Bill to amend and consolidate certain enactments relating to the Law of Landlord and Tenant within the territories under the administration of the Lieutenant-Governor of Bengal.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 10th May, 1883.

D. FITZPATRICK,

SIMLA;

The 3rd May, 1883.

Secretary to the Government of India,

Legislative Department.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE Sth MAY 1883.

General Remarks.—Heavy showers have again fallen in Assam and good rain is also reported to have occurred throughout Bengal proper. In Madras rain has fallen more or less throughout the Presidency. In the Bombay Presidency heavy rain is reported from parts of Dharwar and slight showers from three other districts. In Mysore and Coorg rain has fallen in all districts. Elsewhere there has been no rain to report for the week under notice. No report has been received from British Burma.

The harvest of certain crops continues in the Madras Presidency, with an outturn either fair or below average; general prospects are good. In the Bombay Presidency preparations for kharif are in progress in several districts; cotton picking is nearly completed; sugarcane is doing well. Ploughing and sowing are now in full progress in Bengal; crops on the ground are doing well and the harvesting division and in Cuttack. The rabi harvest in the North-Western Provinces and Oudh has yielded a Punjab, the rabi harvest still continues and indigo sowings have commenced in some districts. In the menced in one district. The outturn of the rabi harvest in the Central Provinces is reported excellent; threshing and winnowing are still in active progress. In Assam considerable damage has occurred good condition; land is being ploughed for the rice crop in Mercara. In the Nizam's territories preparations are in progress for kharif sowings. In the Central India States and Rajputans prospects

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN THE PUNJAB FOR 1881-82.

Nos. 164-761, dated Simla, the 30th April 1883.

RESOLUTION-By the Government of India, Public Works Department.

READ-

Letter from the Government of the Punjab, No. 14121, dated 20th March 1883, forwarding copy of the Revenue Report of Irrigation Works in the Punjab for 1881-82, and of the Resolution by that Government reviewing the Report.

Observations.—The total capital outlay incurred up to the end of the year under review amounted to R5,47,57,363; the gross revenue assessed to R39,31,566: the maintenance charges, direct and indirect, to R17,47,245, and the net revenue to R21,84,321, or 4 per cent. on the total capital expenditure to the end of the year, excluding the capital cost of the Muzaffargarh Canals, which is not known. Deducting from the total capital outlay R2,89,56,192, expended upon the Sirhind and Swat River Canals which had not come into operation during 1881-82, the net assessed revenue yields a return of very nearly 8½ per cent. on the balance, which represents the total capital cost of the canals which actually irrigated during the year. The surplus of accumulated net revenue over accumulated interest charges payable up to the end of the year amounted to R 1,82,27,075.

2. The following statement compares the assessments of 1881-82 with those of the three previous years:—

	-	3 .	*	Assuss	MENTS.	
Cana	Le.		1881-82.	1880-81.	1879-80.	1878-79.
Bári Doáb Western Jumna Inundation Canals Madhupur Workshops	ed La		# 13,53,590 11,44,440 14,33,536	# 15,19,068 10,29,669 10,95,551	13,85,454 13,13,685 7,34,778	# 10,71,772 11,71,994 6,34,918 225
•	TOTAL		39,31,566	36,44,285	34,33,917	28,78,909

The decrease on the Bári Doáb Canal was due to the season being unfavorable for irrigation. The hope expressed by the Local Government that the revenue of the Western Jumna Canal had reached its lowest figure in 1880-81 and would thereafter improve, seems likely to be verified. The large increase under the head of Inundation Canals was mainly caused by an indirect credit of R2,38,483 on account of enhancement of land revenue due to the Muzaffargarh Canals, for which nothing was allowed in the returns of the previous year, but there was also an increase of R75,000 in the canal revenue assessed on the Upper Sutlej Canals, due to the excellent administration of the officer in charge of them.

8. The working expenses, including indirect charges, amounted to-

				WORKING	Express.	
CANA	LLS.		1881-82.	1889-81.	1879-80.	1878-79.
Bári Doáb Western Jumna Inundation Canals Madhupur Workshops		0	5,10,565 4,31,163 8,05,517	R 4,22,718 4,08,254 8,84,252	\$5,02,288 4,75,632 6,47,511 14,861	# 5,14,858 4,16,069 6,18,480 16,412
	TOTAL		17,47,245	17,15,224	16,39,792	15,65,319

The increase of expenditure on the Bari Doab Canal occurs under all heads except "Refunds" and "Indirect charges," and that on the Western Jumna Canal mainly under "Extensions and Improvements" and "Establishment." The decrease of expenditure on Inundation Canals is entirely due to a large decrease of R1,85,453 on the Lower Sutlej and Chenab Canals, the expenditure on all others having increased.

4. The net assessed revenue after deduction of all working expenses amounted to—

					1		NET ASSESSED	REVERUE.	
	CANA	LB.				1881-89.	1890 81.	1879-80.	1878-79.
Bári Doáb . Western Jumns Inundation Canals Madhupur Worksh	ops					8,43,025 7,13,277 6,28,019	# 10,98,350 6,21,415 2,11,299	R 8,93,166 8,38,053 87,267 —14,361	5,57,414 7,55,926 16,438 —16,187
			To	TAL		21,84,321	19,29,064	17,94,125	18,18,590

The net assessed revenue of the Bári Doáb Canal yielded 5.42 per cent.; that of the Western Jumna Canal 8.6 per cent.; and that of the Inundation Canals, for which Capital and Revenue Accounts are kept, 31.25 per cent. on the total capital outlay (direct and indirect) to the end of the year under review.

5. The statement of areas irrigated, which is given in paragraph 5 of the Resolution of the Punjab Government, shows a large and satisfactory increase in the area watered by the Inundation Canals.

On the Western Jumna Canal the area under sugarcane was 50 per cent., and that under cotton nearly 40 per cent. greater than that watered during the previous year.

Of the total area irrigated by the canals of the Punjab during 1981-82, 602,860 acres, or 36 per cent., were under wheat.

6. The statement given below shows a slight improvement in the duty done by the water entering the heads of the Bári Doáb and Western Jumna Canals—

		1881	-82.	1880	-81.	1879-80.	
CANALS.		Kharif.	Rabi.	Kharif,	Rabi.	Kbarif.	Rabi.
Bári Doáb Western Jumna .	Per cubic foot per second. Acres Acres Acres R	64·9 196 67·6 295	143·4 320 65·8 205	54·8 161·7 62·4 178·5	144·6 819·6 62·8 138·2	59·7 172·5 79·6 24S·4	117·7 259·8 61·6 134·8

7. The maintenance charges per acre irrigated are compared below-

						PRE ACRE	IRRIGATED.	
	Can	ALS.			1881-82.	1880-81.	1879-80.	1878-79.
Bári Doáb .					1.39	0.97	1.27	1.57
Western Jumna					1.48	1.58	1.53	1.04
Inundation Canals	•		٠		0.79	1.02	1.25	-88
On whole area					1.08	1.09	1.34	1.10

- 8. The cost of measuring irrigated areas and of preparing demand statements is given in paragraph 17 of the Resolution by the Local Government, and enquiry is being made into the possibility of reducing charges under this head.
- 9. From paragraph 18 of the Resolution by the Local Government it appears that the charges for collection of canal revenue include cost of measuring and assessing the irrigated areas. This was not understood when the Local Government was asked to reduce the charges to 5 per cent. on the revenue collected. From the figures given by the Government of the Punjab it would, however, appear that it may be found possible to reduce the charges on this account on the Western Jumna Canal from 8.17 to 6.50, or 7.0 per cent.
- 10. The balances of canal revenue remaining uncollected on the 1st of April 1882 amounted to R63,044-8-5 out of a total demand of R19,84,313-7-2. The balances uncollected on the 1st April 1881 amounted to R1,82,622, and those of 1879-80 to R64,262.

ORDER.—Ordered, that copies of this Resolution and of the Report and of the Resolution by the Punjab Government be forwarded to the Secretary of State and to the Finance and Commerce and Revenue and Agricultural Departments of this Government for information.

Also, that copies of this Resolution be forwarded to the Government of the Punjab for information and guidance.

The Governments of Madras, Bombay, Bengal and North-Western Provinces and Oudh, Public Works Department.
The Chief Commissioners, Central Provinces and British Burms,
The Foreign Department, for communication to the Resident at Mysore and Coorg.
The Resident at Hyderabad.
The Agents to the Governor General, Central India and Residents.

Raiputana

Also, that copies of this Resolu-tion and of the Report and Resolution by the Punjab Government be forwarded to the Local Governments, Administrations and Officers noted in the margin for information.

Also, that this Resolution, the Resolution by the Local Government, and the Chief Engineer's Report, with a few selected tables, be published in the Supplement to the Gazette of India.

By order,

HENRY A. BROWNLOW, Colonel, R.E., Deputy Secretary to the Government of India.

Proceedings of the Hon'ble the Lieutenant-Governor of the Punjab and its Dependencies, in the Public Works Department, No. 1411I., dated 20th March 1883.

READ-

Revenue Report of the Chief Engineer, Irrigation Works, Punjab, for the year 1881-82.

RESOLUTION .- The result of the working of the canals in the year under review again shows an improvemennt on that of the previous year. The net revenue of the works in operation in excess of all charges, including interest, by assessments, is 3.99, against 3.52 in the previous year, and by collections 4.61, against 8.78, but the last figure was the result of abnormal credits.

- 2. The area irrigated has increased from 1,565,877 acres in the last year to 1,687,725, notwithstanding that there was a falling-off in the Bári Doáb Canal of 65,078 acres. There was an increase of 34,994 acres in the Western Jumna Canal, and this shows that the cultivators on that canal are resuming much of the irrigation that had been temporarily abandoned.
- 3. The Capital invested by Government in the Punjab Canals amounted to R4,49,78,190, in addition to which R97,79,178 has been contributed by Native States for the Sirhind Canal, so that the total cost of the Punjab Canals bas been R5,47,57,368.
- 4. The above includes R19,25,106 spent on the Swat River Canal classed as a Famine Relief Protective Work, and excludes R8,55,648 which had been expended on surveys made some years ago for new canal projects, and which Government of India have ruled in para. 2 of their Resolution No. 65-66 A-I, dated 5th April 1882, should be classed as works for which neither Capital nor Revenue Accounts are kept.
- 5. The returns from the canals in operation by collections amounted to R5,05,981 in excess of all charges for working expenses and interest, so that there was a profit of H1 13 per cent. on the Capital invested by Government, including that locked up in the Sirhind and Swat River Canals, which are not yet in operation.

Up to date the receipts have exceeded the whole of the charges by R1,82,27,075.

- 6. Of the permanent canals in operation, the Capital amounted at the end of the year to 142,38,45,044, of which R4,48,224 had been spent during
- 7. The gross revenue collected during the year was R26,63,251; the working expenses R9,41,728; the interest charges R9,03,267; and the profits R8,18,256, or 3.43 per cent. on th Capital invested, against 7.56 per cent. in the previous year.
- 8. But the latter included adjustments on account of previous years; deducting these the percentage was only 2.29 or 1.14 less than the year under review.
- 9. The realizations on account of the lease of water-power continue to exhibit a satisfactory increase, as will appear from the following:—

	1881-82.	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
Western Jumna Canal.	16,366	18,952	6,108*	112*	11,648	15,287
Bári Doáb Canal .	71,669	64,029	45,759	45,504	85,290	38,542
Total .	88,035	82,981	51,867	45,616	46,938	53,829

The receipts in these years on Western Jumna Canal were abnormally low, for reasons explained in previous reports.

This revenue is almost entirely due to the rentals paid for the native flour mills, the single exception being the sugar works near the head of the Bári Doáb Canal. During the year, however, the Egerton Woollen Mills were established on the same canal, and enquiries have been since made by the Manager of a Company composed entirely of native capitalists who propose to utilize for ice-making and general purposes the water-power that is still available at the tail of the Delhi Branch of the Western Jumna Canal.

- 10. The Capital invested in the Inundation Canals in operation, with which is included the Mádhopur Workshops, at the end of the year, was R19,21,037, being R33,446 less than at the commencement of the year; this was due to a decrease in the suspense balances and principally to the sale of stores collected in the Mádhopur Workshops. This does not include the Muzaffargarh Canals, for which no Capital Account is kept.
- 11. The gross revenue amounted to R10,82,287, the working expenses to R6,37,753, and the interest to R74,299, so that the profit was R370,235, or 19.27 per cent. after paying all charges.
- 12. By assessments the gross revenue would amount to R10,86,804, and the profit to R3,74,752, or 19.51 per cent.
- 13. Although not pertaining to the year under review, it may here be remarked that the extension of the system of Inundation Canals from the great rivers of the Punjab, referred to in para. 14 of the observations of the Government of India in the Revenue Report for 1880-81, has received attention, and that three Divisions have been constituted for the purpose of preparing projects in detail for the construction of Inundation Canals from the Sutlej, Chenab and Ravi Rivers, of which the two former are far advanced, and will shortly be submitted for the sanction of the Supreme Government.
- 14. Surveys of the Ravi in connection with the project for a canal in the Montgomery District are also in progress.

15. The following table shows the area irrigated in the last five years:-

	CAN		1881-82.	1880-81.	1879-80.	1878-79.	1877-78.
Permanent Inundation	•		668,547 1,019,178	698,631 867,246	704,003 516,341	726,018 692,2 6 1	774,969 549,511
		TOTAL	1,687,725	1,565,877	1,220,344	1,418,279	1,324,480

On the permanent canals there has been a satisfactory increase of 34,994 acres on the Western Jumna Canal, which is, however, more than balanced by a decrease of 65,078 acres on the Bári Doáb Canal, the cause of which is explained in detail in the Chief Engineer's report. The increase on the Inundation Canals is due to the favorable conditions of the rivers.

16. As directed in para. 8 of Government of India's Review of the Revenue Report of 1880-81, classified statements of crops irrigated in each Canal Division have been appended to Chief Engineer's report.

17. The cost per 100 acres of measuring the irrigated areas and preparing the demand statements was as follows:—

							1881-82.	1880-81.	1879-80.
Western Jumna	Canal						2.53	2·34 2·68	2·05
Bári Doáb	53	٠		•		٠	2·95 1·18	1.45	1.69
Inundation	21	٠	*	,	•				

The possibility of effecting some reduction in the amount of these charges is referred to in paras. 18 and 40 of Chief Engineer's report, and will not be lost sight of.

18. The cost of collecting the canal revenue for four years is as follows:-

	1	1861-62.			1880-81.			1879-50.			1878-79.	
	Total Bevenue.	Charges for collection.	Percentage.	Total Revenue.	Charges for collection.	Percentage.	Total Revenue.	Charges for collection.	Percentage.	Total Bovenue.	Charges for collection.	Percentage.

Total Inundation Canals	16,58,684	43,917	2164	13,82,437	3R,442	2:78	7,15,104	25,184	3153	7,19,817	29,275	4.0
GRAND TOTAL .	43,21,315	2,34,944	6:63	49,79,119	2,22,765	4'47	33,12,777	2,33,815	7'03	29,02,965	2, 8,108	618

There appears to be no possibility of reducing the cost of collection, which includes that of measurement to the limit of 5 per cent. proposed by the Government of India in para. 12 of its review of last year's report. The low percentage shown in 1880-81 was abnormal, in consequence of the inclusion in the accounts of considerable arrears of revenue on jágír lands. The figures for present year do not differ much in the aggregate from those of the years 1879-80 and 1878-79. The fees paid to Lambardárs and Patwárís amount to 5 per cent. on the direct water-rate, which in a normal year may be taken at 70 per cent. of the gross revenue, so that these fees would of themselves amount to 3.5 per cent. It has been shown in the preceding para, that the cost of measurements vary from 2.5 to 3 per cent., and the salaries of the superior and inferior Revenue establishment form the balance of the charges under this head.

WESTERN JUMNA CANAL.

- 19. The area irrigated by this canal has increased by 34,994 acres, which justifies the hope expressed in last year's report that the depression under which this canal has suffered for the last few years from causes that have been explained in previous reports was only temporary, and that there would be a steady expansion of the area under cultivation.
- 20. The collections of the year give a profit of 6.06 per cent. and the assessments 4.92. The profit by assessments is less than that by collections owing to large arrears of water-rent having been collected during the present year. These percentages are not results after paying interest.

The percentage on collection last year, excluding that due to adjustments on account of arrears of revenue on jágír lands, was 3.59, and on the assessments 3.81.

- 21. The working expenses were R1.43 per acre irrigated against 1.54 in the previous year, and the establishment charges 0.80, against 0.86.
- 22. After deducting all charges, the balance at credit of this canal at the end of the year was R2,60,53,432.

BARI DOAB CANAL.

- 23. The area irrigated by this canal was 368,002 acres, being a decrease of 65,078 acres; this is mainly due to an unfavorable season. It is hoped that the construction of kharíf rájbahás, two of which have recently been sanctioned, will lead to greater stability in the revenue of this canal in future years.
- 24. The collections of the year show a net profit of R2.03, against R1.64 per cent., which was the normal profit in the previous year.
- 25. The assessments give a net profit of R1.58, against 2.72 in the previous year. The charges and interest unpaid at the end of the year were reduced to R60,79,691.
- 26. The charge for establishment is 0.623, against 0.526 per acre irrigated in the previous year; and the working expenses 1.39, against 1.01. Both these rates are necessarily higher than those of the previous year, owing to the decrease in the area of irrigation.
- 27. The balance uncollected at the end of the year has been reduced from R43,204 to 35,387, but there is still room for reduction in the amount of outstandings.

UPPER SUTLEJ INUNDATION CANALS.

- 28. The net profit on these canals was 6.46 on the Capital, against 0.53 in the previous year. The accumulated interest unpaid at the end of the year was R6,20,114.
- 29. The area irrigated was 221,982 acres; but deducting from this the area on which remissions have been granted on account of flooding and river spill irrigation, the area finally assessed was 179,578 acres; this is largely in excess of the greatest gross area ever before irrigated. The steady increase in the area irrigated from these canals is very satisfactory, and can only be attributed to the improvements in administration that have been effected by the Executive Engineer in charge.

LOWER SUTLEJ AND CHENAB CANALS.

30. The profit on these canals was R205.93 per cent., against.179.97 in the previous year.

1-1-6"

- 31. The amount of land revenue was R3,07,837, against R3,09,687 in the previous year. The balance at credit of these canals, after paying interest and all other charges, was R42,83,575.
- 82. The area irrigated was 346,278, which is 14,639 acres in excess of the largest previously recorded (1878-79).
- 33. The cost of cultivation to the irrigators was R1.51 per acre, against 1.76 in the previous year, the decrease deing due to the irrigation of a larger area.

INDUS INUNDATION CANALS.

- 34. The profit on these canals was 15.86, or excluding an adjustment of R98,525 on account of arrears of land assigned to Jágírdárs, 1.94 on the Capital, against 3.44 per cent. in the previous year.
- 35. From the above causes the balance of interest unpaid was reduced from **B4,21,594** to R3,09,329.
- 36. There was a profit to Government on the half share of the clearance rates of R7,598, which reduces the loss on this account up to date to R30,194; the balance uncollected under this head was R51,552.
- 37. There was an increase of R4,591 in Maintenance charges, which is due to an abnormal expenditure on silt-clearances and in watching embankments; and in Establishment of R17,415, owing to adjustment of Direction charges in the previous year.
- 38. The area irrigated was 190,802 acres, being 26,417 acres in excess of that in the previous year; 22,338 acres more than the average of the previous nine years, and only 18,000 acres less than that for 1878-79, which is the greatest on record.

MUZAFFARGARH CANALS.

- 39. The amount credited to these canals during the year on account of land revenue for previous year was R2,29,046.
- 40. The accounts for the year show a profit of R4,08,013; but omitting the above credit, the profit is R1,78,967.
- 41. The area irrigated was 248,593 acres, being 8,687 acres more than the previous year, and 67,770 acres than the year 1879-80. The cost of the irrigation to the cultivators was 1.37, against 1.80 in the previous year.
- 42. These favorable results are attributable to improvements in management since the transfer of these canals to the Irrigation Department.

SHAHPUR CANALS.

- 43. The profit on these canals was 33.85 on the Capital invested, against a loss of 2.45 per cent. in the previous year.
- 44. At the end of the year the balance of profit in excess of all charges including interest was R34,010.
- 45. The area irrigated was 11,523 acres, being 2,388 acres in excess of the previous year. The great increase in the profits of these canals during the year under review is largely due to the thorough clearances effected under the directions of an officer who was specially deputed for the purpose.

By order of the Hon'ble the Lieutenant-Governor,

R. HOME, Lieut.-Colonel, R.E.,

Joint-Secy. to Govt., Punjab, P. W. D., Irregation Branch

CHIEF ENGINEER'S REVENUE REPORT FOR THE YEAR 1881-82.

WESTERN JUMNA CANAL.

The expenditure during the year was R4,57,657, which raised the Capital invested to R82,92,972 at the end of the year.

It consisted of-

Works (net after Establishment	ded	uction o	f re	eceipte :	an:	d suspen	se b	alance	s) .	# 8,27,963
Tools and Plant						•				1,01,839 6,287
				-			m			
				60 - 104	1	Indirect		TAL ges		4,86, 089 21,568
							To	ral,	٠	4,57,657

- 2. Of the expenditure on works, R17,617 was spent on the Main Line; R19,908 on the New Main Line; and R2,30,634 on the New Delhi Branch including the Hánsi and Bútána Branch; R1,017 on the Okla Navigation. Channel; R61,641 on Distributaries and R173 on Drainages. The establishment charge was 30.7 on the gross expenditure on works.
- 3. The heavy percentage of establishment on works is due to the lapse of more than a lakh of rupees from the grant for the year. The causes which led to this short expenditure were to a great extent unavoidable. Objections raised by the Municipal Committee of Delhi to the proposed alignment of and disposition of spoils from the Okla Navigation Channel were only overcome late in the year, and work was consequently for some time in abeyance. There was also short expenditure on distributaries owing to delay in the submission of detailed estimates.

4. The Revenue Account is as follows:-

EXPENDITURE.	RECEIPTS.
Extensions and Improvements . 24,465 Maintenance and Repairs . 1,16,867 Compensation . 4,895	Water-rates 5,67,013 Owners' rates 2,56,191
Establishment—	Miscellaneous
Direction 27,654 Executive . , 1,11,885	Total . 12,01,850
Revenue	Enhanced land revenue in dis- tricts where owners' rates are not yet in force—
Tools and Plant 4,277 Refunds of Revenue 636	Karnal Districts 5,118
TOTAL . 3,91,430 Indirect charges Leave and Pension allowances . 89,733	Hissar do. 46,824 Umballa 1,395 Assigned land 5,059 ————————————————————————————————————
Total Working Expenses . 4,31,163 Balance, Profit . 8,08,175	in previous year . 20,803
TOTAL 12,39,338	TOTAL . 12,39,388

The balance of receipts is thus R8,08,175, or 9.74 per cent. on the Capital invested.

- 5. The interest charge for the year amounts to R3,05,377. Deducting this the net profit of the year is R5,02,798, or 6.06 per cent. on the Capital. The accumulated profits at oredit of the Canal is R2,60,53,432.
- 6. The improvement is due in a great measure to the realization of arrears as noted in a subsequent para., but the increase in area irrigated during the year under review affords good grounds for expectation that the improved rates of interest will be maintained.
- 7. Of the expenditure under maintenance R24,465 was on account of extensions and improvements; R8,006 of this was on account of the Canal office at Delhi; R8,334 on the Juah jhil drain; and the remainder in petty items.
- 8. The cost of repairs calls for no special remarks, as it is rather less than in the preceding year.
 - 9. The following table shows the working expenses for the last five years:-

PARTICULARS.	1881-82.	1880-81.	1879-80.	1878-79.	1877-78.
	R	R	R	æ	R
Extensions and improvements . Maintenance and repairs Establishment, including fees	24,465 1,21,762	16,321 1,21,209	8,714 1,32,211	12,974 1,33,916	3,983 1,43,019
on collection Tools and Plant Profit and Loss	2,40,290 . 4,277	2,28,761 7,052	2,92,135 3,062	2,62,932 5,263 811	2,68,853 6,263

Total .	3,91,480	3,73,436	4,36,238	4,15,435	4,18,725
Book charges .	89,732	34,818	39,394	* * *	•••
Total Working Expenses	4,31,163	4,08,254	4,75,632	4,15,435	4,18,725
	Acres.	Acres.	Acres.	Acres.	Acres.
Area irrigated .	300,545	265,551	\$10,686	398,460	507,974
Rate per acre, excluding Book	1.30	1.41	1.40	1.04	0.82
Rate per acre, including Book oharges	1.43	1.54	1 63		801
Establishment, rate per acre .	0.80	0.86	0.84	0.00	0.25

^{10.} There is an increase under the head of establishment due to the larger collections during the year under review. The other items of expenditure in the above table call for no remark. Owing to the increase in area irrigated there is a corresponding diminution in the rates per acre.

^{11.} The balance uncollected at the end of the year was R23,700, against R1,30,365 in the previous year.

^{12.} The previous paras. refer to actual cash transactions of the year, dealing with assessments (a table of which is given below for 5 years), the result

shows profit for the year of 8.60 per cent. excluding, and 4.92 including the interest charges.

	1881-82.	1880-81.	1879-80.	1878-79.	1877-78.
	R	R	R	R	R
Water-rate from irrigation .	7,79,298	6,79,868	8,44,064	10,17,451	11,91,862

Miscellaneous	5,213	6,609	9,184	4,217	2,847
	78,046	66,980	55,002	41,199	56,116
Total .	10,93,996	9,27,387	8,99,066	10,58,650	12,47,978
Enhanced land revenue	50,444	1,02,282	2,75,835	3,83,480	3,73,757
GRAND TOTAL .	11,44,440	10,29,669	11,74,901	14,42,130	16,21,735

^{18.} The increase of nearly a lakh of rupees in water-rate from irrigation and more than half a lakh from owner's rates show that the anticipations of last year's report (para. 13) have been realized.

15. The table below shows the details of the working of the canal for the last five years:—

PARTICULARS.		1881-82.	1880-81.	1879-80.	1878-79.	1877-78.	
AREA IRRIGATED.		Acres.	Acres.	Acres.	Acres.	Acres.	
Kharif	Per cont. 5 55'80 132,824		144,668 54.48 120,883 45.52	174,172 56:05 136,514 43:96	204,388 51 29 194,072 48:71	215,135 43:34 292,839 57:65	
TOTAL		800,545	265,551	310,686	398,460	507,974	

^{14.} Nearly all the items of miscellaneous revenue show a satisfactory increase. The principal items are—receipts for rafting of timber, on which there is an increase of R11,440; sales of water, R2,660; and of other canal produce, R1,102. There is a satisfactory decrease of R1,441 under the head of Fines. The Superintending Engineer explains that the falling-off in receipts from 'water-power' are due to the water being required for irrigation, and from 'miscellaneous' to the small tenders for saltpetre earth on the Hánsi Canal.

PARTICULARS.	1881-82.	1880-81.	1879-80.	1878-79.	1877-78.

" rajbahas per acre irri-	0.08	0.07	0.08	0.04	0.04

^{16.} There was a falling-off in rabbi area in the Hánsi Branch, due to the unusually large area under kharíf crops in the previous year, but the decrease in this division was more than compensated for by an increase of nearly 90 per cent. in the areas of the two other divisions.

The decrease of irrigated area is attributed to the introduction of owner's rates in the Umballa district.

There was very little rain in Karnál, Delhi and Rohtak Districts during the months of September and October, and the increase of rabbi irrigation in the Karnál and Delhi Divisions is due to this cause.

17. The following table shows a comparison of the areas of the principal crops grown during the last five years:—

	P	ARTIC	ULARS.			1881-82.	1880-81.	1879-804,	1878-79.	1877-78.
						Acres.	Acres.	Acres.	Acres.	Acres.
Sugar-car	ne	4				36,294	23,846	46,978	44,006	42,135
Rice				٠		43,376	48,372	44,076	48,383	34,783
Cotton	•	•	٠	•	.	60,485	44,218	63,201	76,256	65,98%
Wheat	e	٠		٠		98,335	93,644	103,470	140,374	306,361

There is an increase in all the more valuable crops except rice; the area under sugar-cane is 50 per cent., and that under cotton nearly 40 per cent. greater than in the previous year. There is no doubt that the people have become better acquainted with the new system of assessment and are resuming their usual cultivation.

18. Cost of measurement and preparation of demand statements was-

		MEASU	REMENTS	4	CE	MEAI	ND ARE,	A		DEMANI	STATE	SM RS	NT.

Whole Canal .	4+3	•••	400	hvo	2,712	1'61	2,465 132,824	1.84		*49	1,381	76	1,146	0104
verage of 8	400	4.0	000	460	2,707 191,336	1.40	2,308 176,679	1:31	•••	70-	1,077 0	89	976	0,98

The percentage of cost of measurements and preparation of demand statements on the acreage irrigated is for the whole canal 2.53. The circumstances of the three Divisions are not alike, the high charges are in the Delhi Division, and the necessity for them is under investigation.

19. The value of crops irrigated during the year amounted to R95,58,979, against R90,46,039, in the previous year.

20. The table of rain-fall shows that the rain-fall during the earlier months of the kharif did not differ perceptibly either in amount or distribution from the corresponding period of the previous year, so that as before mentioned the improvement in area must have been due to other causes. The marked

deficiency of rain during September, October, November and December caused increased demand for water for the rabbi crops.

BÁRI DOÁB CANAL.

22. There was an expenditure of R6,939 on Works; R1,741 on Establishment and Tools and Plant; and R369 on account of Indirect charges against the Capital Account; but there was a decrease of R28,462 in the suspense balances and receipts which reduced the Capital Account by R14,413. The Capital invested at the end of the year amounted to R1,55,52,072.

23. The Revenue Account is as follows: -

EXPENDITURE.		RECEIPTS.	
M.A. L. Mark D. S. C.	R		R
Extensions and Impprovements Maintenance and Repairs Compensation	37,108 1,80,879 6,889	Miscellaneous	1,15,265
Retablishment—		TOTAL DIRECT RECEIPTS	2,95,227

Total Working Expenses	5,10,565		
Balance Profit (being 5.87 on Capital in-	9,13,348		-
Total .	14,23,913	TOTAL .	14,23,913

- 24. This shows a balance profit of R9,13,348, or R5.87 on the Capital invested, against R8.71 in the previous year; but the latter profit included R2,24,138 water-advantage rate for 1879-80, and R2,03,745 on account of arrears for jágír lands.
- 25. The interest charge for the year is R5,97,890, so that the net revenue, after paying all charges, is R2.03 per cent., against 4.39 in the previous year according to the year's account, but deducting the arrears 1.64 per cent. The balance of unpaid charges and interest at the end of the year was R60,79,691.
- 26. The sum of R37,108 spent on extensions and improvements includes R7,807 for improving inspecting bungalows; R14,236 for construction and improvement of mills; R6,893 on an inlet and outlet for Egerton Woollen Mill channel; R3,859 on drainage syphons; R1,344 on water-course heads; R2,396 on improvement of cross communications; R505 on Mádhopur Station roads; and R68 on petty items.
- 27. In maintenance and repairs there is an increase of R29,837, due principally to heavy repairs on the falls and weirs; rebuilding the Luliani weir; extensive silt-clearances on the lower part of the Main Branch Lower; demarcating canal lands, and to cost of bunds and cuts in connection with the Chakki torrent.
- 28. There is an apparent increase of R14,559 in Establishment charges, which is due to the Direction charges being abnormally low in the last year, owing to an adjustment of the charges for the previous year.

29. The following table shows the detailed cost of Establishment for five -

	1881-82.	1880-81.	1879-80.	1878-79.	1877-78.

Omitting the adjustments of the year 1880-81 for Establish- ment	* 1 9	1.01	1.24	• • •	g o b

The profit on assessments of the year under review are less than those calculated on either collections or assessments of the previous year. The collections of 1880-81 were swollen by arrears of land revenue, and the assessments were for a year very favora ble for irrigation operations. The Superintending Engineer reports that during the current year the seasons were most unfavorable to the spread of canal irrigation. The total rain-fall of the year was about 60 per cent. in excess of the average, and moreover the distribution of the rain was such as to exactly suit the wants of the cultivators. There were good spring rains; and the monsoons set in early in June and continued without long breaks till the middle of September; and there was also a copious and well distributed rain-fall in January and February at the only time of the whole year when there appeared any good hope of increasing the irrigated area, viz., towards the close of the kharif, when there was a partial cessation of the rains, a failure of supply occurred and put all extensions out of the question, and even endangered the crops already irrigated. The failure of the supply was due to the river at Madhopur having set over to the Kashmir side. This necessitated the construction of a bund, which involved a heavy expenditure both of money and of time. It is to be hoped that the system of sunken bars (which was commenced last cold weather, and will now be vigorously pushed on) will, when completed, obviate any repetition of the failure above adverted to.

31. The owner's rate or land revenue dependent on the canal for the year is as follows:—

EA	CH CLASS.							R	R
	1,605	. {	Acres	@ 1-8 ,, hal	f rates		. =	2,159 124	2,283
	4,582	.{	29 31	,, 1-4 ,, hali	f rates	٠	, =	5,569 80	5,649
	25,944	.{	23	,, 1-2 ,, hal	f rates	•	. =	26,237 1,466	27,708
	179,797	.{	23 93	,, l ,, hal	f rates	•	. =	1,60,896 9,450	1,70,346
	156,074	.{	23 22	" 12 " hal	annas f rates		, describ	1,03,499 6,778	1,10,277
•	368,002		age rat	æ 0·86	, or 18	abna	s 9 pi	ees	3,16,258

32. There is a decease in the water-rate assessed of R1,48,792, and in the land revenue of R11,035, due to a less area having been irrigated, as explained in para. 30. Under Miscellaneous revenue the decrease has been R5,651, due mainly to less receipts from Plantations, Fines and Miscellaneous. The decrease in Plantations to a smaller demand for fuel during the year; that under Fines to a change of nomenclature, as much of what used to be credited under this head is now classed as water-rates. The decrease under Sundry collections is due to the abnormal inflation of that item in the previous year by the sale of land and material to the Egerton Woollen Mills Company. There is a satisfactory increase in the receipts from water-power; the receipts during the present exceed those of the previous year by R 7,640.

33. The following table compares the several items for five years :-

	ITEMS.	1881-82.	1880-81.	1879-80.	1878-70.	1877-78.

^{35.} The causes of the falling-off in area irrigated, as compared with 1880-81 have already been explained in para. 30. The decrease is most noticeable in the kharif, and is due to the unfortunate change in the course of the river at a critical time. The works now in hand will, it is believed, be sufficient to prevent a recurrence of a failure of supply. Notwithstanding seasonable winter rains, the rabbi area compares not unfavorably with the average of previous years. It is believed that when the river is brought under control, the irrigation of this canal will become more uniform, and that even in bad seasons it may be expected to reach 350,000 acres. Considerable

attention is therefore now paid to the construction of works for the control of the river and to the strengthening of the rapids on the upper part of the canal.

Rájbaha	•	•	862-0	37.3	862.0	41.4	862.0	46	706	37	706	61

The increased cost of maintenance of canal channel was explained in paragraph 27.

37. The percentage of each class of crop is given below:-

	CLASS.		1881-6	32.	1880-8	31.	1879-8	1879-80.		9.	1877-7	8.
	OLLOS,		Area.	Per cent.	Area.	Per cen t						
Class I.			19.707	9.5	10 907	0.0	10.836					
		•					10,718					
" II.	•	*	33,261	8.0	45,098	10.4	43,166	11.0	37,114	11.4	24,705	9.8
;, III.	٠	٠					239,052					
" IV.	٠	•	91,855	25-0	107,268	24.8	98,502	25 0	62,515	19.1	72,536	27.2
" V.	٠	•	1,533	0.4	2,464	0.6	1,879	0.5	2,118	0.6	6,531	2:4
	101											
	TOTAL		368,002	100	483,080	100	393,317	100	327,558	100	266,995	100

The Superintending Engineer justly remarks that in classes III., IV. and V. the proportion has remained nearly the same, that there has been a considerable increase in class I., and a corresponding decrease in class II. This is only what might have been expected, as the cultivation of class I. (sugarcane) extends over so long a period that it is almost certain to require canal irrigation at some period or other of its growth, whereas in the case of class II. (rice) there will necessarily be much less need for canal-water in a year of such heavy monsoon rains as that under review.

88. The proportion of flow to lift irrigation for the last five years is shown in the following table, which shows that the percentage is practically constant:—

	 Сво	Ps.		1881-82.	1880-81.	1879-80.	1878-79.	1877-78.	REMARKS.
Kharif		. •	•	92.07	92.10	91.70	91.87	91.90	Flow.
Rabbi		٠		85-91	86.04	85.90	84.94	85.78	Do.

39. The area of the principal crops grown is shown below for the last five years:—

4	Chor	8		1881-82.	1880-81.	1879-80	1878-79.	1877-78.
Rice .			ا الانتهاب	32,582	44,594	42,772	36,719	24,215
Cotton	0			28,712	23,314	25,913	23,036	10,545
Sugar-caue	. "			12,707	12,397	10,718	8,746	6,339
Wheat			•	179,748	219,838	197,865	171,936	136,279

The decrease in rice and wheat is due to favorable rains; the increase in cotton to the state of the market. Sugar-cane shows a very slight increase; this last crop remains so long in the ground that when once planted it can hardly escape being watered at some time or other during the year.

40. The cost of measurements and preparation of demand statements was as follows:—

	COS	T ANI	RED.	1		DEMAI	ND STAT	EMEN	TS.	
	KHARI	P.	Rabe	7.	LAST 1 SUBMI		KHANI	y.	Rabbi	
	Area and amount.	Rate per 100 acret.	Ares and amount.	Rate per 100 acres.	Kharif.	Rahbi,	Cost.	Rate per 100 acrés.	Cost. #	Rate per 100 acres.
n .6.		R		R				R	-	R
1st Division	059:79 81,789	2 97	666:33 45,795	1.45	18 Nov.	12 May	709-86	2.23	963 01	2.10
2nd ,,	1,280:32 95,088	1:35	1,748*34 196,336	89	14 Dec.	24 May	1,683.59	1.77	3,139-73	1:60
Whole Canal	1,940·11 126,872	1.23	2,414.67 241,130	1 00			2,393 15	1-88	4,102-74	1.7
Average for five years .	1,598 125,907	1.27	2,144 281,882	-92	***		2,334	1.83	3,733	1.6

The cost of measurements and of the subsequent preparation of demand statements for the year under reriew was nearly R3 per cent. on the acreage. This small increase on the figures for the previous year is due to the irrigation of an unfavorable year being always more difficult to bring to book; the percentage is higher owing to the area measured being smaller. The subject of the cost of measurements is receiving attention, and it may be expected that some economy will be effected.

- 41. The balance outstanding on 1st April was R35,387, as against R43,204 in the previous year.
- 42. The value of the crops grown under irrigation is estimated at R1,02,91,555.

43. The following table shows a comparison between the rain-fall of the last two years, and shows how very unfavorable the seasons were for canal irrigation:—

Total .	1,49,084	Тот	. 1,49,084

- 47. The interest charge amounts to R 20,892, so that the profit of the year is 6.46 in excess of all charges, including interest. The balance of interest unpaid is R 6,20,114.
- 48. The working expenses amounted to R83,114 exclusive of the book charges. This is R2,614 less than the charges for the provious year, and is due to the scarcity of labor for the clearances at the head of the Khanwah Canal; the work was consequently unfinished at the close of the official year.
- 49. Including the book charges the working expenses amounted to R90,803, against R90,426 in the previous year.
- 50. The above statements are based on the collections of the year. If the assessments be taken as the basis of calculation, there is a great improvement, as they amount to R2,55,731, an increase of R1,06,647. The profit would then be R28.51 per cent. excluding and R24.90 per cent. including interest.
- 51. A comparison between the assessments of the two last years is given in the following table:—

			1881-82.				DIFFER	ENCH.
		ARE	A IRRIGAT	BD.	Amount.	1880-81.	37	7
		Flow.	Lift.	TOTAL.			More.	Less.

Fluctuating Land Revenue		2,00,901	1,46,621	54,280	
GRAND TOTAL		2,55,731	1,80,648	75,088	-

52. From the above table it appears that there was an increase of \$\mathbb{R}4,899\$ in the water-rate; \$\mathbb{R}15,047\$ in the water-advantage rate; and \$\mathbb{R}54,280\$ in the fluctuating land revenue of the Montgomery District, which was due to the river having been favorable to the extension of irrigation from the Katora Canal, and to the excellent working of the Upper Sohag Canal.

The charges in miscellaneous revenue are so small as to call for no special remarks.

53. The area irrigated during the last five years is shown in the following table:—

					LAHORE.			Монтвоми	BY.	
	YEAR	J.		Kbarif.	Rabbi.	TOTAL.	Kharif.	Rabbi.	TOTAL.	GRAND TOTAL.
1881-82				18,830	39,253	58,083	62,352	101,547	163,899	221,982
1880-81				20,295	28,192	48,487	59,951	46,098	106,049	154,536
1879-80				10,621	15,233	25,854	46,368	27,255	78,623	99,477
1878-79	9		0	16,355	18,380	34,735	67,902	30,324	98,226	132,961
1877-78	1.0			6,380	10,738	17,118	38,244	25,823	64,067	61,185

The area irrigated in 1880-81 was described in the report for that year as the largest then on record; it is again exceeded by that of the year under review. Remissions from various causes have reduced the area finally assessed to 179,578 acres, which is still largely in excess of the gross measurements of any previous year. The large increase during this year is mainly due to the water from the canals at times of high flood in the river reaching many villages which do not ordinarily obtain water.

54. The statement below compares the areas of the principal crops grown in the last five years:—

		Све	P8.			1881-82.	1880-81.	1879-80.	1878-79.	1877-78
Rice Cotton Sugar-cane Jowar Wheat	* *			6 6	4	14,825 16,829 129 6,350 93,098	20,701 8,441 109 5,868 47,519	18,220 5,716 96 5,908 19,952	17,471 84,835 155 1,955 25,714	7,380 15,906 129 4,925 18,934

The decrease in area under rice is said to be due to the cultivators fearing a repetition of the losses which accrued through the failure of supply in the

previous year. The early rise of the river was favorable for the cultivation of cotton. The principal increase is, as in the previous year, in the area under wheat.

55. The incidence on the area of the fluctuating land revenue in the Montgomery District during the last five years has been as follows:—

		1881-82.	1890-91.	1879-80.	1878-79.	1877-78.
Kharif .	R Acres	1,13,788 = 1.8	1,06,957 59,951 = 1.8	87.603 46,366 = 1.8	$\frac{1,26,767}{67,902} = 1.9$	65,096 = 1·7
Rabbi .	Acres	87,113 1,01,547 = 0.9	39,664 = 0·9	23.540 27,255 == 0.8	$-\frac{24,792}{30,324}=0.8$	$\frac{20.798}{25,823} = 0.8$
Whole year	(R Acres	2.00,901 = 1.2	1,46 621 = 1.4	$\frac{1,10,603}{78,623} = 1.5$	1,51,559 98,226 = 1.5	$\frac{86,894}{64,067} = 1.3$

56. The following table shows the area of each class of crop for three years:—

							1881-89.	1880-81.	1879-80.
Class I.			۰		,		14,939	20,795	18,269
" II.							22,818	13,406	8,336
" III.							42,591	45,434	89,584
" IV.							188,422	78,256	31,646
, V.		•		0	a		3,182	1,646	1,662
						-			
				To	TAL		221,982	154,536	99,477

57. The following table gives some details of the working of these canals for the last four years:—

				-	1881-82.	1880-81.	1879-90.	1878-79.
	Kharif				66.2	62.7	31.4	45.7
Duty per cubic foot of supply	Rabbi		٠		189.0	165.4	162.8	116;8
4.	Year				209-5	188.7	69.2	90-4
- Lie	Kharif	•			100.7	91.5	50.9	73.3
Income per cubic foot of supply.	Rabbi				148-4	119-9	119.8	81.2
supply.	Year	٠			217.5	153-5	85.9	114-8
	Per cubi	e foot	ofsup	ply	73.7	75.8	76.1	64.1
	,, more	irrige	ated		0.89	0.54	1.09	0.7
Cost of Maintenance	,, mile	of ca	nal		173.6	225.3	233.5	192.5
	22 22	of Re	ijbaha		35.1	30.4	73.38	70.7

^{58.} The duty per cubic foot of mean supply shown in the table attached to the last para. is based on the assumption that kharif irrigation has ceased at the end of August. The date is an arbitrary one, but is as good as any other that can be assumed, the fact being that irrigation for both crops is to a great extent simultaneous. A large rabbi crop, owing to its taking less water than an equal area of kharif sowings, swells the duty and the income per cubic foot of discharge. The cost of maintenance is low for reasons which have been stated in a previous para.

59. Cost of measurements and preparing demand statements:-

		MEASUREMENTS.						DEMAND STATEMENTS.				
Ристисте.	KHARIP.			Rabbi.			KHARIP.			RABBI.		
#** ### ### ### ### ### #### ##########	Area.	Cost.	Per cent.	Area.	Cost.	Per cent.	Area.	Cost.	Per cent.	Area.	Cost.	Per cent.
Lahore & Montgomery	01 100	# F00.10			R			R			R	
rwnore & montgomery	. 81,182	590.12	0.72	140,800	886-12	0.43	81,182	539.63	0.88	140,800	711-37	():5

The increase in cost of preparing demand statements for the kharif is due to the large number of objections to the measurements and to separate returns having been prepared of unauthorized irrigation. Both these subjects have received attention, and measures have been taken to obviate their recurrence to the same extent in future.

60. The dates on which measurements were commenced, completed and announced are given below:--

	LAS	IORE.	MONTGOMERY.			
	Kharif.	Rabbi.	Kharif.	Rabbi.		
Commenced	lst Sep. 1891 26th Nov. 1881	10th Mar. 1882	lst Sep. 1881 6th Dec. 1881 27th Jany. 1882	25th Mar. 1881		

61. The Superintending Engineer reports that the causes of delay in completing the irrigation assessments of this year were as follows:—

The very large area to be measured and assessed; the enormous number of tanázahs or objections to assessment put in by the irrigators, and which needed to be enquired into in detail; a more careful mode of measuring than heretofore used was insisted upon this year; additional irrigation occurring after the kharif measurements had been commenced; the temporary Amins employed in the Lahore District were with one exception new men without experience of the work; and lastly, a prominent cause of delay in completing the assessments was the very inadequate strength of the Revenue staff consisting of one Dárogha and two Náib-Zilahdárs. The Local Government has now (September 1882) sanctioned a very considerable increase to the temporary establishment, and although the value of this increase will very probably not become apparent during the year 1882-83, which, so far as irrigation is concerned, is practically closed, it is hoped that the benefit will be apparent in 1883-84, and the strain on the establishment will, at any rate, be sensibly lightened.

62. The following are the dates on which demand statements were submitted to the Deputy Commissioners:—

GRAND TOTAL .	5,82,319	GRAND TOTAL.		5,42,819

- 68. From the above it will appear that the balance of profit was R2,31,046, or R209.84 per cent. on the Capital invested; or, after deducting the interest charges of R4.305, R205.93 per cent. The total sum at the credit of the canals, after paying all charges, is R42,83,575.
- 69. The Zar-i-nágha expenditure consisted of—extensions and improvements R235 for making maps of the canals; maintenance and repairs, R64,390, which is R10,270 less than the previous year; the decrease is due to the failure of contractors to complete their work in time for payment during the year under review.
- 70. The amount of Imperial repairs was R11,741, or R179 in excess of last year.
- 71. In the Establishment charges there is a decrease of R24,996 on the previous year, due principally to an adjustment of the Direction charges in the accounts of last year.
- 72. In the Miscellaneous revenue there is an increase of R9,100, which is due to large sales of wood, a large number of trees having been cut down in widening the Pakhtúwah Canal.
- 73. There is a decrease of R2,56,870 on the land revenue credited; this is due to arrears of revenue on account of land assigned to Júgírdárs having been included in the accounts of the previous year; omitting this sum the amount for the year is R3,07,837, as against R3,09,687 in the previous year, the decrease of R1,850 being due to the collection of arrears during the previous year. R3,353 were remitted during the year. The Superintending Engineer explains that the remissions were only due in part to the failure of a proper supply in the canals, and that many of them were made on account of poverty of the owner, or because he had elected to cultivate some other part of his estate.

74. The following table compares the items of miscellaneous revenue for five years:—

·	1881-82.	1880-81.	1879-80.	1878-79.	1877-78.

76. The following table shows in detail the attendance of laborers during the last two years:—

Particulars.		1881-82		1880-81.			Difference.	
	Sutlej.	Chenab.	TOTAL	Sutlej.	Chenab.	TOTAL.	More.	Less
Called out	343,364	168,205	511,569	392,680	181.979	574,659		63,09
Present	. 260,229	127,039	387,268	307,673	142,412		*****	
Bemitted to Panchayats .	19,424	11,574	30,998	16,797	10,828	450,085 27,625	3,373	62,8]
TOTAL	279,653	138,613	418,266	324,470	153,240	477,710	-	55,44
Actual absentees	63,711	29,592	93,303	68,210	28,739	96,949	1	3,640

77. The number of chhers called out has been necessarily diminished by Rule 21 of the Revised Rules for the management of the Canals in the Mooltan District; and the actual number of absentees is therefore 3,646 less than in the previous year; but the percentage of absentees, instead of decreasing as was expected under the operation of that rule, has increased from 16.9 to 18.2. The following table shows the percentages for the last five years:—

				Present.	Remitted.	Absent.	Fine in rupees.	RRMARES.
1881-82 1880-81 1879-80 1878-79 1877-78	4 4 0	* *	•	75 70 78-30 79-77 78-72 78-94	6·10 4·80 5·17 4·74 5·87	18·20 16·90 15·06 16·54 15·19	69,748 48,474 40,864 48,305 36,127	

The sum levied on absentees is high, but the increase in each realizations over that of the previous year is mainly due to the working of Rule 21 under which H23,096 were received in commutation of labor at the rate of six annasper man. If this sum is deducted from the total, the sum received from fines proper at 8 annas per head amounts to only H46,652, which is H1,822 less than the corresponding amount of the previous year. As this was the first year of the working of the new rule, no fair conclusion can be drawn of its effect; but in the opinion of the local officers the loss of labor which it involves in a country where few men work willingly is likely to delay the work of clearing the canals.

78. The value of labor supplied was-

or for 346,278 acres nearly R1.51 per acre, against 1.76 in last year and 1.71 in 1879-80.

79. The areas of the principal crops irrigated are given below for the last five years. Rice is the only crop in which there is a decrease compared with the last year. There is an extraordinary increase in millet and indigo, and a steady one in wheat. The area fit for the growth of sugar-cane is limited

to the vicinity of Shujabad, and varies but little from year to year. Turnips are chiefly grown for feeding cattle during the winter when forage is scarce and difficult to obtain.

80. The areas irrigated and the proportion of flow to lift irrigation is shown in the following table for the last five years:—

	1881-8	2.	1880-81.		1879-80.		1878-7	9.	1677,78.	
	Area in Per cent.		Area in acres.	Per cent.						
Flow Lift	288,682 57,596	88.4	285,212 64,072	78·6 21·4	221,747 46,293	82·7 17·3	270,785 60,845	81·7 18·3	226,599 58,031	79·6 20·4
TOTAL .	346,278		299,284		268,040		331,639		284,680	100

The total irrigation is 46,994 acres in excess of last year and 14,689 acres in excess of the largest previously recorded, that for 1878-79. The increase in area is due to the favorable rise of the rivers Sutlej and Chenab, which gave early waterings for the kharif and late ones to the rabbi. The high water not only continued longer, but the rise itself was greater than in the previous year.

81. The measurements for this year were again made by the Civil Establishment Patwaris; R1,555 was paid to them as fees, and the total cost, including check measurements, was R2,715, against R2,413 in the previous year, the increased cost being due to the increased area measured.

82. The following statement shows rain-fall at principal stations in the Mooltan District:—

INDUS INUNDATION CANALS.

84. The Capital Account at the end of the year was R7,07,822, being R3,524 less than at the end of the previous year owing to a reduction in the suspense balances.

85. The Revenue Account was as follows:—

EXPENDITUR	RE.	RECEIPTS.	
Extensions and improvements Maintenance and Repairs	R	Clearance rates collected	57,118 12,745
Establishment— Direction Executive Medical Revenue Fees on collection	704 11,608 2,528 	Total R Land Revenue for the year 1,57,498 Arrears on account of land assigned to Jágírdárs . 98,525	
Тотан	. 1,72,521		
Book Charges			
Total Working Expensions Balance Revenue (being percent, on Capital expensions)	19'75 ended) 1,39,859		
GRAND TOTAL	. 3,25,881		
6	ļ.	GRAND TOTAL .	8,25,881

- 86. The balance of profit from the above is R1,39,859, or R19.75 per cent. on the Capital invested; or, after deducting the interest charges, R27,594, 15.86 per cent. But this includes R98,525 on account of arrears of land revenue assigned to Jágírdárs; deducting this amount also the profit, after paying the interest charges, is R1.94 per cent. The unpaid balance of interest at the end of the year is R3,09,329.
- 87. The sum expended on extensions and improvements during the year consisted of the purchase of the Fazalwah Canal for R5.000, petty item of R6, and a writeback on account of the regulator on the Gámúnwála Canal of R415.
- 88. The expenditure on repairs was R4,591 in excess of last year, and is due to a larger expenditue on silt-clearances, and to the necessity for prolonged watch and ward on account of the greater height of the river on the embankment; on this last item R7,643 was expended, against R4,779 in the previous year.
- 89. The cost of the establishment was R17,415 more than in the previous year, due to the adjustment of Direction charges in that year. There was a reduction of R1,671 in the cost of Executive establishment.

II.— ,, of establishment for supervising work 1,123
III.— ,, of repairs to banks 968
IV.—Whole cost of water distribution establishment 1,983
V.—Half cost of measuring establishment 1,768
46,402

against R13,126 in the previous year; this reduces the loss to Government up to date to R30,194, but there is still a balance uncollected of R51,552.

- 91. There is an increase in the miscellaneous revenue of R5,838 over the previous year, due principally to the share of produce of the Massúwah Canal being R5,410, and of the Dhundi Canal R4,187, against R3,039 and 458 in the previous year.
- 92. The share of land revenue for the year is R1,57,498, against R1,57,953 in the previous year.
 - 93. The area irrigated during the last five years has been as follows:-

1881-82. 1880-81. 1879-80. 1878-79. 1877-78. 190.802 164,385 144,387 208,888 171,604

94. The comparison between the irrigated area of the year and that in previous year is given below:—

The second by the second residence	1 1	BOP.		1881-82.	1990-91	Difference.
Kharif Rabbi			a 0 1	128,782 62,020	121,075 43,310	+ 7,707 + 18,717
	Ť		TOTAL .	190,802	164,385	+26,417

In addition to the area shown above as irrigated, an area of 10,811 acres was flooded with waste water during the kharíf, and this brings the total up to 201,613 acres. This is the best on record, with the exception of the year of

great floods, 1878-79, but a larger area came to maturity during 1881-82, as no damage was done by the floods and inundation which in 1878-79 destroyed a large proportion of the crops. The area flooded by waste water for the growth of grass is very nearly the same as in the previous year, being only 20 acres less. It will be seen from the table that the increase in area was chiefly in the rabbi, when the river was far more favorable than in the beginning of the season. On the whole, this was a most favorable year for these canals. There were few such changes in the river as necessitate the construction of new heads. The floods were high but not dangerous, and there was no damage to crops by inundation either from the river or from the hill torrents.

95. The rain-fall was more than in the previous year at Dera Gházi Khan and Rájanpur. A comparison for the last five years is given below of the principal stations:—

NAME OF STATION.					1881-82.	1880-81.	1879-80	1878-79.	1877-76.	
Sanghar					2.3	4.2	4:0	12.8	7-0	
Dera Gházi	Khan				7.1	5.2	2.95	9 37	6.]	
Rájanpur					1.9	1.7	0.5	4.8	2.5	

96. The area of the principal crops grown is shown below for the last five years:—

,	Сво	P0.			1881-82.	1880-81.	1879-80.	1878-79.	1877-78.
Jowár and	Bájra	(millete	в)		49,591	44,738	33,460	33,117	24,203
Wheat					57,759	41,451	45,876	62,402	37,479
Cotton					32,492	30,103	24,250	22,648	85,158
Indigo				. 1	17,317	10,815	5,598	6,697	28,711
Rice					12,284	12,976	11,197	10,143	11,245

From this it will be seen that there was a large increase in all the crops, except rice, in which there was a slight decrease of 692 acres.

97. The following table shows the area watered by each canal during the last four years:—

No.	1	NAME	OF CA	WAL.		1	1881-82.	1880-81.	1879-80.	1878-79.
	>									
1	Massuwah						3,628	2,842	2,305	2,588
	Mánka.	,				.	35,811	27,710	19,880	29,824
3	Kot Dáúd						3,762	3,936	3,728	3,165
4	Shoria .						29,771	33,138	29,667	27,487
5	Kastúri					. 1	20,181	17,633	15,610	15,250
6	Dhingána						18,811	20,407	19,120	19,025
	Chibri .					. 1	7,545	4,210	5,640	7,290
8	Sahiba .						14,389	10.927	8,812	11,571
8	Gámúnwála			,			4,542	3,664	2,721	2,892
	Sohan .						9,368	7,824	7,156	7,534
-	Núr .						13,334	7,186	4.623	10,243
	Dhundi						17,053	18,134	14,806	20,432
	Kutab .	•					7,211	7,046	5,692	5,916
	Kádra .						5,396	4,728	4,567	3,807
	atendin ,	•	•	•	•	·	0,000			
				Tor	AL		190,802	164,385	144,337	166,524

There is a falling-off in the area under the Kot Dáúd, Shoria and Dhingána Canals, which was due to the unsatisfactory state of the river- at their heads. The Mánka and Núr ran for nearly the whole year to the great benefit of the cultivators, as no charge is made for the additional waterings which they thus obtain.

98. The percentage of flow to lift irrigation for the last four years is given below:--

YEARS.		KHARIF.		PRECEN	TAGBA		RADBI.		PERCENTAGE.	
zazs.	Flow.	Lift.	TOTAL.	Flow.	Lift.	Flow.	Lift.	TOTAL.	Flow.	Lift,
1881-82 1880-81 1879-80 1878-70	. 114,157 . 108,834 . 87,718 . 125,635	14,625 12,241 8,893 11,810	728,782 121,075 96,611 137,445	88·6 89·9 90·8 91·4	9°9 10°1 39,702 3,608 43,310 0°8 9°2 45,786 1,940 47,726		43,310 47,726	90°2 91°6 98°9 96°7	9·8 8·4 4·1 3·3	

99. The measurements were conducted by the District Patwaris, and the rates per acre for the last eight years were—

Years.									200	Percentage.
1881-82									100	1.68
1880-81				75			٠		ISTAN .	
1879-80	•					•		a	g*	2.48 -
	0	*	•	*						2 02
1878-79		4								2.23
1877-78				digit.	0			9		2.18
1876-77	٠			4						2.49
1875-76										2.54
1874-75				4	4					2.34

The measurements were commenced on 5th October 1881 and finished on 11th March 1882, the time occupied being 158 days, against 120 in last year; the actual area measured was 201,614 acres, against 175,217 in the last year; the reduced cost was due to the measurements having been made wholly by map instead of almost entirely by chain as in previous year.

100. The cost of preparing the revenue papers during the year was 0·16 per 100 acres, against 0·19 in the previous years.

101. The following statement shows the rain-fall at the principal stations in the Dera Gházi Khan district:—

MUZAFFARGARH INUNDATION CANALS.

103. This is only the second regular report on these Canals which were taken over by this Department at the commencement of last year; and the information is consequently not so complete as that available for the other Inundation Canals.

104. The following is the Revenue Account:-

EXPENDITURE.	R	RE	CEIPTS.	
Maintenance and Repairs ESTABLISHMENT Direction R 9,287 Executive 18,590 Revenue 13,552	22,685	Miscellaneous Contributions from 2 Value of Statute lab	or , as	196 15,902 92,150
Tools and Plant Statute labor	41,729 488 92,150	For current year Do. 1880-81	TOTAL R 2,38,488 ,, 2,29,046	1,08,248
Book Charges— Leave and pension allowances	1,57,052	,		4,67,529
Total Working Expenses Balance profit	1,67,764 4,08,013			5
GRAND TOTAL .	5,75,777	GRAN	TOTAL .	5,75,777

105. In the balance profit is included R2,29,046 on account of Land Revenue for previous year; deducting this sum the net profit for the year is R1,78,967, and the total profit to date R3,64,968. Of the expenditure on Maintenance and Repairs, R6,783 is from Imperial Funds, and is principally on account of the establishment for supervising statute labor; the balance R15,902 is from the Zár-i-nágha Fund, of which R4,785 is on account of expenditure during last year, which was adjusted in the accounts of this year.

There is an increase of R5,098 in the Establishment charges as compared with the previous year. Of this sum R857 is on account of Direction, due to an increased expenditure on Maintenance and Repairs; R1,558 to variations in the Executive Establishment; and R2,683 under Revenue is due to the employment of 12 additional Mírábs, and to an increase of travelling allowances.

106. The following table compares the different items of Miscellaneous Revenue for two years:—

									1881-82.	1880-61

SHAHPUR INUNDATION CANALS.

114. There was no change in the Capital Account during the year; the amount is R40,739.

115. The Revenue Account is as follows:-

EXPENDITURE.		R		RECEIPT	'S.	R
Maintenance and Repairs . Establishment, Direction . Tools and Plant .		9,057 499 4	Water-rates.	• ,	٠	. 25,003
TOTAL	٠	9,560				
BOOK CHARGES— Leave and Pension allowances	٠	95				
TOTAL WORKING EXPENSES	٠	9,655				
Balance Revenue		15,848	,			
GBAND TOTAL		25,008		GRAND TO	TAL	. 2003,5

The balance of Revenue was R15,348, or 87.67 per cent. on a Capital of R40,739; deducting the interest charge of H1,555, the net profit is R33.85 per cent.

- 116. The balance at credit of the canals at the end of the year was R34,010.
- 117. The area irrigated was 11,523 acres, against 9,135 in the previous year; this was due to better silt-clearances, and to the frequency of floods in the Jhelum river.

118. An officer was deputed during the cold season of 1881-82 to these canals who saw the clearances carried out and effected some necessary improvements in their channels; he also investigated the state of some of the district canals and suggested extensions and improvements of several of them.

119. The annexed statement gives the result of the past five years for the canals under the charge of this Department:—

GOVERNMENT OF INDIA PUBLIC WORKS DEPARTMENT BAILWAY TRAFFFIC.

oppicers by whom the periodical inspections of the several rail WAYS ARE TO BE MADE.

Circular No. X Railway, dated Simla, May 4, 1883.

Read again-

Public Works Department Circular No. 16 Railway, dated the 19th June 1878.

No. XV Railway, dated the 2nd February 1881.

No. XXXVII Railway, dated the 6th September 1881.

letter No. 500 R.E., dated the 18th July 1882.

OBSERVATIONS.—Owing to the rapid expansion of railways, a redistribution of the charges of the several Consulting Engineers as regards inspection of new lines previous to their being opened for traffic, the half-yearly inspection of open lines, and the investigation into accidents, has been rendered desirable.

RESOLUTION.—The Governor General in Council is accordingly pleased to rule, in supersession of all previous orders, that from the 1st July 1883, the circles of inspection shall be formed as follows, the Consulting Engineers performing the abovementioned duties on all those railways stated against their names :-

(a) Consulting Engineer for Railways, Madras (subject to the concurrence of the Government of Madras).

are to be made.

Madras South Indian Mysore Nizam's

Consulting Engineer for Railways, Bombay (subject to the concurrence of the Government of Bombay).

Great Indian Peninsula Dhond and Manmad Berar Branches Bhopal Wardha Coal Bombay, Baroda and Central India Patri Salt Branch. Gaekwar of Baroda's Bhavnagar-Gondal Rajputana-Malwa including sections of the Rewari-Ferozepore as opened Jodhpore Nagpur-Chhattisgarh Southern Mahratta East Indian Patna-Gya

(c) Consulting Eugineer for Guaranteed Railways, Calcutta.

Dildarnagar-Ghazipur Sindia Eastern Bengal Calcutta and South-Eastern Northern Bengal Nalhati Tirboot Dacca-Mymensing Assam* Kokilamukh Darjeeling-Himalayan Bengal Central Deoghur Bengal and North-Western Tarkessur

Railways on which inspections | New lines to be inspected previous to opening.

railways in the Madras Presidency, Mysore, and districts to the south of the Tongabhadra river, and all the branches and exten-sions of the lines enumerated in previous column.

All railways in the Bombay Presidency excepting Sind and all branches and extensions of lines enumerated in the previous column, and also all new lines forming junctions with the same.

All railways in Bengal, British Burma, and Assam, and all brunches and ex-tensions of the lines enumerated in previous column, and also all new lines forming junctions with the

ially arranged for (see paragraph 3). · Investigation of accidents to be open

(d) Consulting Engineer for Guaranteed Railways, Lahore.

Consulting Engineer for

Railways,

Guaranteed

Lucknow.

are to be made.

Sind, Punjab and Delhi Amritear-Pathankot Indus Valley and Kandahar Punjab Northern Pindi-Murree Rewari-Ferozepore (first inspection previous to opening only).

Oudh and Rohilkhand Bareilly-Pilibhit Rohilkhand-Kumaon Cawnpore-Farakhahad Hathras-Muttra-Achneyra Bengal and North-Western

Railways on which inspections | New lines to be inspected previous to opening.

> All railways in the Punjab and Sind, and all branches and extensions of the lines enumerated in previous column, and also all new lines forming junctions with the same.

All branches and extensions of the lines enumerated in previous column, and also all new lines forming junctions with the same.

- 2. Railways which are opened subsequent to the issue of these orders will come within the circle of the officer who makes the inspection previous to opening, unless special orders are passed to the contrary.
- 8. As regards railways in British Burma and Assam, the Chief Commissioners of those provinces will each nominate an officer independent of the Railway Department of the province to perform the duties of Government Inspector for the investigation of accidents, and the periodical inspections in Burma will be conducted under the orders of the Chief Commissioner.
- 4. The Consulting Engineers are also empowered to depute the powers with which they are vested by this Resolution to any of their Deputies who have been duly appointed by Government to act as Deputy Consulting Engineers.
- 5. In special cases where it may be deemed inexpedient by the Local Administration to adhere strictly to these orders, such as the inspection of small additions to the railway in Burma, the orders of the Government of India should be taken in each instance.

ORDER.—Ordered, that this Resolution be forwarded to the Governments,

The Governments of Madras, Bombay, Bengal, the North-festern Provinces and Oudh, and the Punjab. The Chief Commissioners, Central Provinces, British Burma,

The Cater Assault and Assault.

The Resident at Hyderabad.

The Agents to the Governor General for Rajputana, Central India, and Beluchistan.

The Director General of Railways.

The Consulting Engineers for Guaranteed Railways.

Administrations and Officers marginally noted for information and guidance.

Ordered also, that this Resolution be forwarded to the Home Department for information, and that it be published in the Supplement to the Gazette of India.

W. S. TREVOR, Colonel, R.E., Secretary.

PUBLIC WORKS DEPARTMENT.

GOVERNMENT OF INDIA' LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 26 VIC., CAP. 67.

The Council met at Government House, Simla, on Thursday, the 10th May, 1883.

PRESENT

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.B., presiding.

His Honour the Lieutenant-Governor of the Panjab, K.C.S.I., C.I.E.

His Excellency the Commander-in-Chief, G.C.B., C.I.B.

Major the Hon ble E. Baring, R.A., C.S.I., C.I.E.

Licutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.

The Hon'ble C. P. Ilbert, C.I.E.

The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.

The Hon'ble T. C. Hope, c.s.I., c.I.E.

The Hon'ble W. W. Hunter, LL.D., C.L.E.

The Hon'ble J. W. Quinton.

NORTH-WESTERN PROVINCES AND OUDH LOCAL BOARDS BILL.

The Hon'ble Mr. QUINTON moved for leave to introduce a Bill to provide for the constitution of Local Boards in the North-Western Provinces and Outh. He said:—

"My Lord—I have the honour to move for leave to introduce a Bill to provide for the constitution of local bodies in each district of the North-Western Provinces and Oudh, to administer the expenditure of that portion of the rates levied on land which is applicable to local purposes in that district, and of the income accruing from certain other sources of revenue which may from time to time be made applicable to like purposes.

"The object of the Bill is to give effect to the views of the Government of the North-Western Provinces and Oudh on the subject of local self-government as enunciated in the Resolution of that Government, dated Lucknow, 5th December 1882, and published, together with the letter of the Home Department conveying the general approval of the Government of India of Sir Alfred Lyall's proposals, in the Local and Imperial Gazettes during the same month.

"The law at present in force in the North-Western Provinces and Oudh does not admit of these proposals being fully carried out. The levy of rates in the united Provinces is authorised by Acts III and IV of 1878. Those Acts prescribe rigidly the proportions in which the rates levied under them are to be allotted by the Local Government to each district, and direct the appointment of district committees for the purpose of assisting in determining how the allotments shall be applied, and in the supervision and control of the expenditure of such allotments; but they leave the appointment of the district committees and the definition of their functions and authority altogether in the hands of the Local Government; they allow of the number of members of each committee being so small as six, and of half even of this small number being Government officers; and they enable the Local Government to divert to general provincial objects all balances of the annual allotments remaining unexpended at the close of each year.

"The duty, therefore, devolves on me of asking from the Council leave to introduce Bills which will remove these obstacles to giving effect to the Resolution interposed by the existing law, and substitute for it enactments under which the proposals of the Local Government can be brought into operation.

"With a few exceptions, on which I need not dwell, as there will be ample opportunity for discussing them in Committee, the Bill embodies and throws into

legislative form the recommendations of the Resolution.

"Those proposals have been the subject of long and careful deliberation with the Government of the North-Western Provinces and Oudh. During the rainy season of last year, under instructions from His Honour the Lieutenant-Governor and Chief Commissioner, District and Divisional Officers put themselves in communication with the leading non-official gentlemen of their respective charges, including the members of municipal and district committees. Meetings were held at tahsils by Collectors or their Assistants, and at head-quarter stations by Commissioners. The points on which the Government-wished for information were fully discussed at these meetings and elsewhere, and the outcome of the meetings and discussions was a mass of reports filling more than 300 closely printed pages. In August, the Lieutenant-Governor convened a large committee at Naini Tal, presided over by the Senior Member of the Board of Revenue, and having on it as members three Commissioners of Divisions, four District Officers, the heads of the Police and Educational Departments, two officers of the Secretariat, one of whom—Mr. Woodburn—had been a Doputy Commissioner of long experience and great officiency in Oudh, and four distinguished Native gentlemen, one of them—the Hon'ble Rájá Sivá Prasád—a Member of this Council.

"To this Committee were referred for consideration and report the Resolutions of the Government of India on the subject of local self-government and the orders of the Local Government on the subject of those Resolutions, the reports of Divisional and District Officers to which I have above altuded, and a draft Bill embodying such provisions of Acts III and IV of 1878, and Act XV of 1873, as seemed prima facie applicable to the new arrangements.

"The report of this Committee is dated the 30th September, and its labours are thus characterised by the Local Government:—

'To this Committee Sir Alfred Lyall is much indebted for clear and well-reasoned conclusions upon all the principal matters referred for deliberation, especially upon the methods best adapted in the present circumstances of the country for carrying out the policy of local self-government as declared by His Excellency the Governor General in Council.'

"Then followed the Resolution of the 5th December recorded by the Local Government, accepting, with certain modifications, most of the recommendations of the Committee. Bills were drafted to effect the necessary legislative changes, which when finally approved of were forwarded to the Government of India; but the Council towards the close of the Calcutta session was so much occupied with more pressing business, that there was no time available for the consideration of those measures; and I am only now in a position to introduce the Bills as revised by the Legislative Department.

"The North-Western Provinces and Oudh Local Boards Bill, as its preamble already quoted sets forth, provides for the constitution of local bodies, in supersession of the existing district committees, to administer the expenditure of that portion of the rates levied on land which is applicable to local purposes in that district, and of the income accruing from certain other sources of revenue which may, from time to time, be made applicable to the purposes.

"The first, and perhaps most important, point dealt with is the constitution of these boards.

"Power is given by section 3 to the Local Government to divide, for the purposes of the Act, each district into sub-districts, which will generally correspond with tahsils; and section 4 establishes for each sub-district a local board having authority over that sub-district, and for each district a district board having authority over the entire district (cantonments and municipalities excepted); while sections 23 and 24 define the relations of local boards to district boards, and the mode in which control by the former is to be exercised

by the latter. The arguments in favour of this are stated by the Local Government in the following passage which I extract from the Resolution of December, 1882:—

"But for the Provinces generally, the Licentenant-Governor quite agrees with the arguments in favour of making the area of each subordinate board's jurisdiction conterminous with a talast; and this plan has accordingly been adopted. On the one hand, the formation of representative boards for the chief subordinate divisions of each district will ensure better knowledge of, and attention to, local wants, more regular attendance at board meeting closer supervision over the departments under local management, and prompter and more effective execution of local works, than is possible with a single district board meeting on at head-quarters. On the other hand, to make separate and independent units of local administration within cachedistrict would tend to break up pieceneal the organisation of the district; and while increasing the necessity for, would throw serious difficulty in the way of, the constant exercise of central direction and control. For it must be admitted that there is little or no parts of many districts, an equal standard, or anything like a level. of general intelligence and working capacity. To set up all these boards as separate administrative bodies would esto accept the risk of great and confusing variety in the results of their administration—a risk that would be greatest in the remote and backward tracts where intelligence and energy are often most required, and where these qualities are of course least likely to be available on the spot. The business of settling matters of finance and adjusting public interests between the several sub-divisional boards concerned in them would cause mush correspondence, and would lead to the multiplication of petty offices, with the probable consequence of wasting much money and time on establishments, and in the preparation, submission and secreting for subturns and reports. The plan of making the central district board an aggregate of the sub-divisional boards is, on the contrary, in many ways favourable to the adjustment of the nutual relation between the

"I may add that the tahsil is in the North-Western Provinces the smallest unit of revenue-administration; that its area is rarely altered; that it is well known to all residents within it; and that it corresponds generally with the boundaries of the topographical division of the country known as parganas.

"The constitution of local bodies being thus provided for, the next step was to determine the method of appointing the members of these boards. Sections 5 and 6 lay down the following broad rules:—At least three-fourths of the members of each local board must be persons residing or owning landed property, or carrying on trade or business, in the sub-district, and must be chosen by election. The remaining fourth may be appointed directly by the Local Government.

"As to the mode of election, Sir Alfred Lyall writes in paragraphs 7 and 8 of the Resolution:—

Whether, and to what extent or proportion, the membership of the boards should be determined by election was specially referred for inquiry and opinion to all the districts of the Provinces; the point was discussed in every district with the result described in the district and divisional reports; and, as is shown in the Committee's report, it was closely debated by the Provincial Committee. The large towns are much alike everywhere; they are always centres of comparative wealth and intelligence; they form constituencies easily represented, and their administration is always open to public observation and criticism. But the ordinary Indian districts possess none of these characteristics, and, as far as can be judged from these papers, the balance of Native opinion preponderates decidedly against the unrestricted introduction into them of the elective system. Such a step certainly appears inadvisable at the present time, when the state of society varies so widely in different parts of the country, when the

whole principle of self-government is novel and imperfectly understood, and when the practice of general election is not only unknown outside the towns, but is apparently not in accord with the feelings and ideas of those classes of the community that have the largest interest in local self-government, and to whom we must look for its success. It is manifest that local self-government—meaning a system of administration by the gratuitous exertions of persons best acquainted with the characteristics of the neighbourhoods in which they are interested, and possessed of means, leisure and public spirit enabling and impelling them to devote themselves to that administration—cannot be initiated and developed into real independence except by the co-operation of these classes, represented by men who can lead and will be trusted by the community at large. This is how all systems of local representation have begun in all times and countries; so that it would be remarkable if in such a country as India the best way of beginning were found to be by popular suffrage. That the services of such men could be secured by open election, that they themselves would seek election or would generally allow their names to be submitted for the purpose, seems from all the information hitherto collected to be questionable. If, therefore, we find that the views and prepossessions, as far as they have been clicited, of persons qualified to form a judgment on the best mode of initiating local self-government, the constitution of the local boards more or less in the hands of the Government, there essens to be no sufficient reason for endeayouring, almost on the spur of the moment, to invent any such elective machinery as would necessarily raise numerous and various questions of franchise and voting rights, and all the practical difficulties inseparable from the attempt to adjust an arbitrary system to the diverse circumstances of the country. In short, the solid and universally recognized fact that local self-government depends absolutely for

Having regard, then, to the extrema importance of placing in competent hands the duties and responsibilities of district administration in the beginning of what is avowedly an experiment, and to maintain the continuity of existing arrangements which imply (in such natters as, for example, education and sanitation) a standard of civilisation in advance of the average intelligence and culture of Native society, the Lieutenant-Governor and Chief Commissioner has decided to adopt in principle the recommendation formulated in the 9th paragraph of the Provincial Committee's report. The Committee proposed that the Government should nominate for each tahsil an electoral body which should elect a certain number of its members to torm the tahsil of sub-divisional board. They advised also that a minimum qualification (on the basis of land-revenue or license-tax assessment) should be fixed, and that details might be left to be settled by local officers. But the differences in the distribution of the population, of wealth and of property in land between and within different districts are so large and manifold, that, after much examination of the question, it has been found impracticable to fix any comprehensive qualification for election purposes, much less to devise methods of canvassing and election that would be everywhere applicable or universally acceptable. The only comprehensive plan that can be laid down at the first introduction of the system is to determine, with reference to the area, revenue and tenures, population, wealth, and to other conditions and special features of each sub-division, how many persons, not being salaried officers of the Government, would fairly represent its inhabitants and interests. The district officer must then be empowered to propare it each district the measures that may be most convenient and appropriate to its circumstances and peculiarities for ascertaining how many suitable persons are available in its sub-divisions and how they can best be chosen. The proceedings taken will be re

"A section will be found in the Bill enabling the Local Government to introduce this system; and any abuse of the power conferred in the direction of limiting the number of electors is guarded against by the proviso that the persons entitled to vote at the election of a member of a local board shall not be less than twenty-five. In addition to the elected members, at least one-fourth may be directly appointed by Government. This principle, my Lord, has been already accepted by the Council in the case of the Central Provinces, and the reasons for it were put forth with great eloquence and force in the debute on the Local Self-Government Bill for those Provinces on the 12th of January last, by the Hon'ble Sayyad Ahmad Khán, a Native gentleman whose ripe experience, broad views, sympathy with his countrymen and disinterested and successful efforts for their enlightenment must always attach the highest weight to his

opinions. I shall read to the Council merely the concluding words of the hon'ble member's speech on the subject:—

'In a country like India, where caste-distinctions still flourish, where there is no fusion of the various races, where religious distinctions are still violent, where education in its modern sense has not made an equal or proportional progress among all sections of the population, I am convinced that the introduction of the principle of election, pure and simple, for representation of various interests on the local boards and the district councils, would be attended with evils of greater significance than purely economic considerations. So long as differences of race and creed and the distinctions of caste form an important element in the socio-political life of India, and influence her inhabitants in matters connected with the administration and welfare of the country at large, the system of election, pure and simple, cannot be adopted. The larger community would totally override the interests of the smaller community, and the ignorant public would hold Government responsible for introducing measures which might make the differences of race and creed more violent than ever.'

"Section 6 of the Bill provides that ordinarily the district board shall consist of all persons who for the time being are members of the local boards of the sub-districts comprised in that district. This provision is in accordance with the views of the Local Government and of the Provincial Committee, who consider that under any other system leading Native gentlemen would not consent to take office, and that any distinction drawn, or supposed to be drawn, in point of position and dignity between membership of the local board, on the one hand, and the district board on the other, would certainly occasion much unpleasantness, besides inducing an element of friction which is manifestly undesirable in the public interests. Power has, however, been reserved to the Local Government to direct that local boards shall elect delegates to represent them on the district board—a power to be exercised in cases when the district board constituted in the ordinary way would be too numerous a body for the efficient transaction of business.

"I need not detain the Council with the details of the arrangement made in sections 7 to 12 respecting the term of office, the resignation and removal. of members of the boards, the filling of casual vacancies and such matters, which will doubtless be fully discussed in Committee, but pass on at once to, the provisions for the appointment of chairmen of the local and district boards.

"It is quite clear that, in a board composed mainly of non-official members new to the work, much of its efficiency will depend on the choice of a chairman, whose functions will be to hold the balance among parties and to guide discussions, and with whom will practically rest the initiation and control of ordinary business. As regards local boards, the Bill is in accordance with the views of the Local Government, which allows them to elect one of their members to be chairman for one year. A majority of the Provincial Committee considered that it would be sufficient for boards to elect a chairman at each meeting, but His Honour the Lieutenant-Governor was of opinion that some element of permanency in the office of president of the local boards would be necessary at first for the proper transaction of business, and in order to preserve continuity of administration and uniformity of procedure. Fresh elections of chairmen at each meeting of the board would open a door to much change and contention, since any decided difference of opinion on matters before the board might lead to a contest at each meeting over the election of a chairman.

"The appointment of a chairman to a district board is, however, a matter of much greater importance, and has everywhere been warmly debated. The views of Sir Alfred Lyall have been expressed on it at some length, and I give them in his own words. They have been substantially thrown into legal form in the 14th section of the Bill:—

'Upon the third point of importance in the constitution of the district and sub-divisional boards, namely, the appointment of their chairman, the Lieutenant-Governor and Chief Commissioner observes that the question of the chairmanship of the district board was the subject of prolonged discussion by the Provincial Committee. Their finding coincides in principle with the opinions and prepossessions generally elicited by the district inquiries, and recorded in the district and divisional reports. Of the four Native members of the Provincial Committee, three strenuously insisted upon the necessity for maintaining by law the chief District Officer as chairman of the district board. The fourth—a gentleman of large property and influence in his own district—held a different opinion; though it may be added that, while he is said to be exceedingly well fitted for the chairmanship, he had nevertheless declined the office in his

own district on the grounds of indifferent health, want of leisure and residence at a distance from head-quarters; and the district and divisional reports, which, in the Lieutenant-Governor's opinion, evince on the part of the writers a most satisfactory disposition to interpret the genuine feeling and wishes of the people, indicate clearly that the main current of Native opinion runs decidedly toward maintaining the position of the chief District Officer at the head of local affairs, until some experience in the transaction of public business and the management of committees has been gained by leading members of the Native community. It is, beyond doubt, expedient that the district board should be exempt from official pressure and unnecessary interference; but the Lieutenant-Governor is confident that in these Provinces all District Officers are thoroughly prepared to give every facility and aid to the policy of the Supreme Government, and to promote whatever measures may be adopted for its introduction. There is accordingly, in Sir Alfred Lyall's opinion, no reason why due weight should not attach to the able and impartial reports of the officers best qualified to inform and advise their Government when they declare that the Native community, so far as it has been consulted, has expressed itself very widely in favour of retaining for the present the District Officer as chairman of the district board. It seems that the District Officer is preferred and trusted in the existing complexion of local affairs and feelings for sound and practical reasons. There can be no question that the experience and business habits of an official chairman will at first be of great assistance to the district boards; and there must also be borne in mind the strong probability that the boards will for a time need much direction and advice, possibly even admonition and control; especially where distinctions of creed or caste, or other differences, still keep alive the germs of antagonism among sections of the Native community.

But * * * the middle course recommended by the Committee in the 12thparagraph of their report, which course the Lieutenant-Governor and Chief Commissioner
has decided, with a slight amendment, to adopt, will further test the wishes of the
country, and will allow time for opinion to form and show itself among the district
boards themselves. The Committee recommend that the District Officer shall be exofficio chairman of the district board, except when the board, on application
made to the Government by a majority of the members, receives permission to elect a non-official chairman from their own body. The Lieutenant-Governor and Chief Commissioner
agrees to the principle, with this modification, that, as soon as all the members of the district
Boards shall have been chosen, or at some time before the end of the present official year,
they shall be invited to assemble for the purpose of deciding whether they wish to proceed to
the election of a non-official chairman, or whether they will leave their chairman's appointment in the hands of the Local Government.

"This concludes all the remarks which it seems to me necessary at present to offer on the constitution of the district and local boards. Section 25 of the Bill provides for the appointment of joint committees of two or more district boards for any purposes in which they may be jointly interested—a provision necessary to secure the due consideration of projects which affect large tracts of country.

"The duties to be performed by district boards will be found enumerated in section 22 of the Bill. These principally consist of the management, construction, repair and maintenance of public roads, wells, tanks, ferries, cattle-pounds, schools, hospitals, dispensaries and other public institutions of a like nature. The district boards will delegate to the local boards authority to deal with all or any of these matters within their respective jurisdictions, and thereby, it is hoped, secure the application to such duties of that local knowledge and local interest which should prove the best guarantee for their efficient fulfilment, controlled by the wider experience of the larger body. I may mention here that section 60 of the Bill amends the Northern India Ferries Act of 1878 by inserting a new section enabling the Lieutenant-Governor and Chief Commissioner to direct that any ferry shall be managed by the district board, and that its proceeds, in whole or in part, shall be paid into the district fund

"For the performance of these duties, boards are authorised to appoint their own servants, under certain restrictions deemed necessary to guard against extravagance and inefficiency; and by section 35 of the Act they are placed in possession of funds to meet the charges which such duties involve.

"Immediately on their constitution they will receive the balances of all allotments made to the district which remain unexpended on that date; and in future such allotments, the amounts of which I would remind the Council

are prescribed by law, will be made over to them, and with the proceeds of the other sources of revenue enumerated in section 35 will constitute a district fund at the disposal of the district committee. Under the present system, there is practically no district fund, for all balances unexpended at the close of the year are swept into the general Provincial Exchequer, and the districts are left with empty treasuries until they receive fresh allotments. This will be no longer possible, and the district committees will be able to carry on their administration from year to year with an accurate knowledge of their financial condition. Their revenues will not at first be large, and an important part of them will consist of assignments made from the general provincial funds; but it will doubtless be in the power of the boards to augment them to some extent by closer supervision of the management of the other sources of income enumerated; and, as they prove their fitness to administer the funds at their disposal, the Local Government will not be backward in increasing its assignments.

"The next point of importance in the Bill is that of control, and on this, I am happy to say, there is no necessity for me to dwell. The principle has been adopted by the Council in the Central Provinces Local Self-government Bill, and the reasons for insisting on it were urged by my hon'ble friends Messrs. Ilbert and Crosthwaite with unanswerable force in the debate on that measure. Their speeches are fresh in the cars of the Council.

"In this Bill the powers of control reserved to the Local Government are almost identical with those conferred upon the Chief Commissioner by the Central Provinces Act, with the exception that, in case of any single resolution, order or act of the committee being in excess of the powers conferred upon it by law, we enable the Commissioner of the Division and the Local Government to deal with such in the same manner as with proceedings likely to lead to a serious breach of the peace, or to cause serious injury or annoyance to the public or to any class or body of persons; i.e., the Commissioner may in such a case suspend action, and, if he does so, must forward the order, with a statement of his reasons for making it, to the Local Government, which may thereupon reseind the order, or direct that it continue in force with or without modification, permanently or for such period, as it thinks fit. I am aware that, under the general law of the land, an injunction might be obtained by any person interested to restrain such an excess of powers; and it is no doubt, true that section 42 of the Bill enables the Local Government, with the previous approval of the Governor General in Council, to supersede a board if it exceed its powers; but recourse to a Court of law is not a remedy likely to command itself to an ignorant and apathetic population, and superssesion is a penalty to which the Local Government would naturally wish to resort only as an extreme measure, and one the frequent application of which it would be reluctant to put in force.

"The last point with which I need trouble the Council refers to the provisions of section 50, which enable the Local Government to except a district or any part thereof from all or any of the provisions of this Bill to which it considers that they are unsuited. The North-Western Provinces and Oudh extend over an area of 100,111 square miles, nearly equal to, and contain a population of 4,400,000, far in excess of, that of the United Kingdom. They comprise 49 districts, with a mean density of population per square mile, varying from 894 in Banáras to 62 in Garhwal, inhabited by heterogeneous races characterised by differences of customs and religions and habits of thought, and stages of civilization ranging from the learned and accomplished Pandits of Banáras and Maulvís of Lucknow to the boors of Bundelkhund, the wild tribes of the Khadir and the barbarous Tharus of the Taráí.

"It is impossible to assume that for such various races any one form of self-government will be equally suited or that intelligent non-official agency can be found in every district of these broad Provinces; and for exceptional cases of this nature sections 50, 51 and 52 are meant to provide. They do not even in such cases deprive the residents of all voice in the management of their local affairs, and they require that even here district committees must be appointed; but, following the present law, they leave the nomination of members of such

committees altogether in the hands of Government, subject to the restriction that one-half shall be owners or occupiers of land or residents in the district; and they do not require, as elsewhere, the establishment of local boards. A similar power unaccompanied by the restriction I have pointed out is given to the Chief Commissioner by the Central Provinces Act."

The Motion was put and agreed to.

The Hon'ble Mr. Quinton introduced the Bill.

The Hon'ble Mr. Quinton also moved that the Bill and Statement of Objects and Reasons be published in the Gazette of India, and in the North-Western Provinces and Oudh Government Gazette in English and in such other languages as the Local Government might think fit.

The Motion was put and agreed to.

NORTH-WESTERN PROVINCES AND OUDH MUNICIPALITIES BILL.

The Hon'ble Mr. Quinton also moved for leave to introduce a Bill to make better provision for the Organization and Administration of Municipalities in the North-Western Provinces and Oudh. He said:—

- "My Lord, I have the honour to move for leave to introduce a Bill to make better provision for the Organisation and Administration of Municipalities in North-Western Provinces and Oudh.
- "Municipalities in these Provinces are at present constituted, and guided in the performance of their duties, by the provisions of Act XV of 1873. That enactment confers upon the Local Government very full powers as to the appointment of ordinary and ex officio members. It leaves to the Government to determine absolutely in the case of every municipality in the united Provinces whether the members shall be chosen by election or nominated by Government; and it further enables the Government to appoint as ex officio members one-third of the whole committee. The manner of election, where elections are allowed, is under the Act regulated solely by the Local Government, without any obligation of consulting the persons most concerned, and casual vacancies among the members are filled up by the same authority, or are not filled up at all, at its pleasure.
- "Further, the Local Government may appoint the president or vice-president of every committee (section 10), and may unconditionally cancel, suspend or limit any of the proceedings, bye-laws or rules of the committees, and abolish (section 29) any tax imposed by them. Section 34 of Act XV of 1873 imposes on the municipality the duty of providing for the maintenance of a police-establishment without any limitation, the effect of which has been to throw on municipalities a larger portion of the cost of police maintained within municipal boundaries for the preservation of the peace and the prevention and detection of crime.
- "The Resolution of the Government of the North-Western Provinces and Oudh, to which I have referred in my remarks on the Local Boards Bill, proposes an extension of local self-government in municipalities incompatible with these provisions of the present law, and this Bill has been drawn up to give effect to those proposals by substituting for Act XV of 1873 an enactment which will bestow upon the residents of areas in which it is in force a much larger measure of control over municipal administration than they now possess.
- "The provisions of the Bill are the result of the same consultative and deliberative measures on the part of the Local Government as those which I have already described in my remarks on the Local Boards Bill. They are based on the inquiries of District and Divisional Officers, considered and weighed by the Provincial Committee, whose conclusions have been accepted with certain modifications by the Local Government.
- "I proceed to notice some of the more important points of the Bill, premising that the substantive provisions of Act XV of 1873 have been rarely

departed from unless when it was necessary for the purpose of giving effect to the proposals of the Resolution of the 5th December, 1882, though epportunity has been taken to make the arrangement of the sections clearer, and to remedy what appeared to be defects in their wording.

"The first chapter, which is of a preliminary character and deals with the application of the Act to fresh places and to those in which Act XV of 1873 is already in force, need not detain us; but Chapter II, on the organisation of municipal boards, is of more importance. Municipal and local boards are to consist of members partly elected and partly nominated; and I need not repeat what I have already said when asking leave to introduce the Local Boards Bill as to the reasons for preferring this system to the more logically symmetrical one of election, pure and simple.

"The principal residents of the areas into which the Act is to be introduced are to be convened in public meeting by the Magistrate or the Deputy Commissioner, for the purpose of preparing and submitting within a definite time proposals for determining the system of representation and election to be established in the municipality. The points for their consideration are enumerated in section 9; and it is only after it has weighed the proposals of the residents on those points that the Local Government can exercise the power conferred upon it of making rules to regulate elections.

"The provisions for the term of office of members of the board, for their resignation and removal, for filling casual vacancies among them, for the incorporation of the boards and such matters are analogous to those of the Local Boards Bill, and call for no remarks from me on this occasion.

"The appointment of chairman is a subject which here also has given rise to considerable discussion. It must be borne in mind that, under the system of appointment of members introduced by this Act, the boards will no longer contain the strong ex officio element which has hitherto formed part of municipal committees, and that in the absence of this the appointment of an efficient chairman becomes a matter of the first importance. The Provincial Committee considered that it would be a mistake to insist on the universal chairmanship of the district officer, who has, they state, hitherto been always chairman of the board; but they went on to say "there is a strong feeling among those interested that in municipalities of the more important kind, where large funds are raised and spent, where the responsibilities are therefore onerous, and where there are considerable cantonment settlements, such as is the case in most of the larger municipalities in these Provinces, it is very necessary to have a thoroughly reliable president, vigilant, capable and unwearied in watching the great interests at stake, and that, so far as present experience goes, such a president can only be found in the person of the district officer. It was in this view that the Native members proposed that the district officer should be ex officio chairman of all municipal boards at the head-quarters of districts, leaving it to outlying municipalities to elect their own official or non-official chairmen as they pleased." The majority of the Committee, which included all the Native members, finally recommended that, except in certain cases to be specified by Government, in which the district officer should be ex officio chairman, every municipality should be permitted to elect its own chairman, who might be official or non-official, as the electors choose. This recommendation was accepted by the Lieutenant-Governor, and has been embodied in section 18 of the Bill, which allows of the election of any person as chairman, subject to the approval of the Local Government, except in municipalities exempted from the operation of this section by notification in the official Gazette.

"The rules for the appointment of vice-chairmen and for filling up casual vacancies in the offices of chairman and vice-chairman, for the appointment of joint committees, for the conduct of business, for the record of the board's proceedings, and the communication of those proceedings to the Magistrate of the district, are similar to those of the Local Boards Bill or to the present Municipal Act.

"Sections 33 and 34 give to municipal boards full powers as to the appointment of officers and servants, except the secretary, whose appointments if an

outsider, is subject to the sanction of the Commissioner, and, if a Government servant, to that of Government. With boards consisting mainly of non-official members and presided over by a non-official chairman, the efficiency of their administration will depend very much on their possessing a capable secretary, and it is to provide an additional guarantee for this that the sanction of the Commissioner is required to the appointment. If the board wish for the services of a Government officer, they must, of course, obtain the sanction of Government to his being so employed.

"Chapter III—Taxation and municipal fund—is substantially the same as the corresponding sections of Act XV of 1873. The only addition made to the taxes leviable with the sanction of the local boards is a tax on boats moored within municipal limits, which seems to have been omitted by an oversight. The sections prescribing the procedure to be adopted in imposing taxes have been re-drafted and made, it is hoped, clearer.

"Chapter IV enumerates the powers and duties of municipal boards, and the opportunity has been taken of re-casting the provisions of Act XV on the subject, so as to exhibit the duties of the boards in their order of obligation.

"The primary charge on the municipal fund is a police-establishment. The law on this subject is very vague. Section 34 of Act XV of 1873 runs as follows:—

Every committee shall provide in the first place from its funds, for the maintenance of the police-establishment in the municipality.

The municipal police shall be appointed under such Act of the Governor General in Council as may be applicable to the town, and their number shall be fixed by the committee, in consultation with the Inspector-General of Police, subject to the final decision of the Local Government.

"The effect of this section has been to throw upon municipalities the charges for police used not only for municipal purposes, but for the prevention and detection of crime. The conclusions of the Local Government on the subject are given in the 17th paragraph of the Resolution of the 5th of December, which runs as follows:—

17. The first of the questions to be considered is the extent to which municipal funds may fairly be relieved of police-charges, and the method of adjusting the charges for which they are fairly liable. The question was discussed by the Provincial Committee, and the unanimous conclusion of the Committee is stated in the 27th paragraph of their report:—

"The preservation of peace and the prosecution and detection of crime are duties for which municipal revenues can hardly be said to be fairly liable, as these duties seem to devolve more equitably on the central Government of the country than on the scattered municipal towns. But the cost of watch and ward, including under this term such additional duties of a miscellaneous kind (e. g., the enforcement of sanitary rules and the regulation of intra-municipal traffic) as clearly appertain to municipal police, appears to be the one of all others that can with most fairness and propriety be debited to municipal funds, and paid for by the people whose interests and property are the immediate objects of the guardianship of the chankidári force."

of 1856 and of rural villages, where the watchmen are paid, not from the general revenues of the country, but from funds raised locally,—in the former by a house-tax levied for the purpose under the Act, in the latter by the local cess levied from landholders along with the land-revenue under Act III of 1878. The principle stated by the Committee appears incontrovertible. For since the inhabitants of small towns and landholders in villages, in accordance with the long-established custom and law of the country, are required to pay for the services of the watchmen who remain on watch at night, who report crime, and who are empowered to challenge and arrest thieves and persons carrying suspicious property within their beats, there is no reason why the inhabitants of the larger towns (in many of which Act XX of 1856 was formerly in force) should, merely through the transformation of the town into a municipality, be altogether exempted from the charge. It is true that many municipalities have, in addition to the legitimate cost for watch and ward, been required to share the cost of the Provincial police employed within their limits; but this arrangement, which is manifestly unfair, will be cancelled; and it now remains only to determine how the legitimate charge for watch and ward is to be computed and adjusted. In a few municipalities, the town watchmen as a distinct body have been abolished, their places being taken by regular police, who form one force, and are paid on the same scale, with the district police stationed within the municipality; while in the majority of the municipalities the town watchmen form a separate body, wear a districtive uniform, and, not being liable for service outside their own town, are paid, like the watchmen, in small

towns and villages, at lower rates than the regular police. The Lieutenant-Governor and Chief Commissioner prefers the latter system, because it marks off a separate body of men for municipal service; but he directs that the question be considered by municipal boards in consultation with the Magistrate of the district and the Inspector General of Police, and that each board be left to decide which system it will adopt.'

"These conclusions have been embodied in sections 44-48 of the Bill.

"The sections of Act XV of 1873 on nuisances have been re-cast so as to throw together all the provisions respecting the jurisdiction of the board, and to bring them into harmony with the Penal Code and the new Code of Criminal Procedure.

"The control sections in Chapter V are similar to those in the Local Boards Bill, and I need not weary the Council by repeating the reasons for their adoption. They fall short in some respects of the powers given by Act XV of 1573 to the Local Government to cancel, suspend or limit any of the acts, proceedings, bye-laws or rules of any committee, but provide otherwise for the occurrence of default, excess or abuse of powers, as, e.g., by the supersession of the board in certain extreme cases—a penalty to which existing municipalities are not legally liable.

"Ample powers are given to the Local Government under section 60 to frame forms and to make rules on matters connected with their business, to which the boards will be bound to adhere.

"Chapter VI contains provisions on miscellaneous matters taken generally from the existing Act.

"Chapter VII empowers the Local Government to exempt municipalities from the operation of the provisions of the Act respecting election. The reasons for this latter provision will be found in those diversities of race, habits, modes of thought and civilization which are to be found in the wide territories and vast populations under the sway of His Honour the Lieutenant-Governor and Chief Commissioner on which I have touched in my observations on the Local Boards Bill.

"Section 68 finally enables the Local Government to withdraw any local area, with the previous sanction of the Governor General in Council, from the operation of this Act or of Act XV of 1873. Experience has shown that the present Municipal Act has sometimes been put in force in small towns where there were no materials for local self-government, no intelligent non-official agency, and where municipal administration, with the taxation that necessarily follows in its train, was unpopular and uncalled for. It is not to be expected that such cases will not occasionally occur again, and changes of circumstances in the progress of years may, in respect of certain towns, bring about the same result. It is expedient to provide at once a remedy which may be legally applied when such conditions manifest themselves. The section has been framed with this object; but, as the withdrawal of a privilege once conferred is open to a more invidious construction than the withholding of that privilege in the first instance, the exercise of the power by the Local Government is made subject to the previous sanction of the Governor General in Council. By this limitation it is intended to secure for the proposal full consideration from more than one point of view."

The Motion was put and agreed to.

The Hon'ble MR. QUINTON also introduced the Bill.

The Hon'ble Mr. Quinton also moved that the Bill and Statement of Objects and Reasons be published in the Gazette of India, and in the North-Western Provinces and Oudh Government Gazette in English and in such other languages as the Local Government might think fit.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 17th May, 1883.

D. FITZPATRICK,

Simla;
The 14th May, 1883.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EDUCATION OF EUROPEAN AND EURASIAN CHILDREN IN INDIA.

No. 102-191.

Extract from the Proceedings of the Government of India, in the Home Department (Education), - under date Simla, the 18th May 1883.

Read again-

Home Department Resolution Nos. 2-56-66, dated the 8th February 1883, on the subject of European and Eurasian education in the Bengal Presidency.

Read also-

Letter from the Government of Bengal, No. 77, dated the 17th April 1883, and enclosure, on the subject of the exclusion of the University Entrance Examination from the schedule of standards for European and Eurasian high schools.

RESOLUTION.

In paragraph 13 of the Resolution read in the preamble, the Government of India approved the proposals of the Committee appointed to draft a Code of regulations for the conduct of European education in the Bengal Presidency, regarding the standards of examination for European and Eurasian schools, except in the case of the final standard for high schools. It was observed:—

The University Entrance Examination is admittedly not a proper standard for schools of this class, and the Government of India direct that it be excluded from the schedule of standards of examination and from Article 27 of the Rules. The final standard for high schools will be that shown as Standard B in the Code submitted by the Committee.

- 2. Two of the members of the Committee have now represented through the Government of Bengal the practical inconvenience which in their opinion must result from the total exclusion, under the orders quoted of the University Matriculation Examination from the schedule of standards for high schools. After a careful reconsideration of the subject, the Governor General in Council, while holding to the opinion that the University standard examination is ill-adapted to regulate or to test the kind of education which the Government of India wish to see imparted to the class of lads on whose behalf the Government is contemplating additional expenditure of public funds, thinks that considerable weight attaches to the arguments now adduced. His Excellency in Council has accordingly determined to include in the schedule of standards for high schools, as an alternative final Standard A, the University Matriculation Examination supplemented so as to equalize it with the standard prescribed in the former Resolution, which will now become Standard B. The subjects which it has been decided to prescribe, under the alternative Standard A, in supplement of those required by the University Matriculation Examination, are shown in the amended schedule attached to this Resolution.
- 3. His Excellency in Council has been further pleased to make certain modifications in Article 27 of the Code regarding the payment of instruction grants to managers of schools for pupils passing the final examination by either standard as how prescribed. Articles 26 and 61 of the Code have also been amended so as to conform with the orders contained in this Resolution.

- 4. Articles 26, 27 and 61 as revised, and the standards of the final examination for high schools as now settled, are appended to this Resolution for information and guidance.
- 5. It may be necessary hereafter to amend the standard of final examination in the case of pupil teachers so as to bring it into closer correspondence with the final standard for high schools; but for the present, as it is desirable to encourage candidates for teacherships to come forward, no change will be made in Schedule 11.

ORDER.—Ordered, that this Resolution, together with the amended Articles and Standards of examination, be forwarded to all Local Governments and Administrations in the Bengal Presidency; to the Public Works Department, and to the Foreign Department for information and communication to the Chief Commissioner of Ajmere and the Agent, Governor General, Central India.

Ordered also, that the Resolution and its enclosures be published in the Supplement to the Gazette of India.

- Revised Articles 26, 27 and 61 of the draft Code of Regulations for European schools as finally accepted by the Government of India; and revised Schedule I-Final examination for high schools.
- 26. Scholars in high schools, who have attended 250 full school meetings after passing by Standard VII, may be presented for examination by either of the alternative Standards A and B of Schedule I. The examination in Standard B will be held at the times and places indicated in Chapter VII for the scholarship examination.
- 27. For scholars passing by either standard, the managers may claim the following instruction grants:—
- (a) In Standard A-
 - (1) Rs. 75 for every scholar passing the University Matriculation Examination in three subjects.
 - (2) Rs. 100 for every scholar passing the University Matriculation Examination in the third division.
 - (3) Rs. 120 for every scholar passing the University Matriculation Examination in the second division.
 - (4) Rs. 150 for every scholar passing the University Matriculation Examination in the first division.
 - (5) Rs. 25 for each pass in the additional subjects in English, in the additional subjects in mathematics, or in an optional subject.
- (b) In Standard B-
 - (1) Rs. 80 for every scholar passing in three subjects.
 - (2) Rs. 120 for every scholar passing in four subjects.
 - (3) Rs. 160 for every scholar passing in all subjects.
 - (4) Rs. 25 for each pass in an optional subject.

No grant can be claimed for additional or optional subjects under either Standard A or B for any scholar who fails in the first case (A) to pass the Matriculation Examination and in the second (B) to earn a grant in the compulsory subjects.

61. Anyone who without having served an engagement as a pupil teacher has completed his 17th year, and has passed by either of the final Standards of examination for high schools in Schedule I may, on the recommendation of the Inspector, receive a provisional third grade certificate. After three years' service with credit his certificate shall be made permanent.

SCHEDULE I.

STANDARDS OF EXAMINATION (HIGH).

(Final Examination.)

GOVERNMENT OF INDIA. PUBLIC WORKS DEPARTMENT.

REPORTS ON THE RECONNAISSANCE FOR A RAILWAY BETWEEN BILASPORE AND SAUGOR, WITH EXTENSION TO JUNCTION ON THE PROPOSED FUTURE BHOPAL-JHANSI BAILWAY.

No. 445 R.C., dated 18th May 1883.

ORDER-By the Government of India, Public Works Department.

Read the following papers:-

- (1) Report by Mr. W. G. Newton, Assistant Engineer, on reconnaissance from Bilaspore to Schagpore.
- (II) Report by Mr. A. Penny, Engineer-in-Chief, Saugor-Katni-Bilaspore Railway Survey, on projected line between Kutnee, Umaria and Schagpore.
- (III) Report by Mr. H. Groves, Executive Engineer, on a reconnaissance from Katni vid Damoh to Saugor.
- (IV) Report by Mr. H. C. D. La Touche, Engineer-in-Chief, Bundelkhund Railway Survey, on projected line from Saugor to junction with Bhopal-Jhansi Railway.
- (V) Abstract of the above Reports, briefly supplemented from other sources.

ORDER.—Ordered, that the above Abstract be published in the Supplement to the Gazette of India for information.

Proposed Railway on the 5' 6" gauge from Belaspore (in the Central Provinces) to Etawah or a junction point with the future line from Bhopal to Ihansi crossing the East Indian Railway at Katni and running through the Umaria coal-fields and Damoh and Saugor.

The whole length of 3523 miles is for convenience divided into four sections:—

- 1. Belaspore to Sohagpore, 120 miles.
- 2. Sohagpore to Katni, 761 miles.
- 3. Katni to Saugor, 113 miles.
- 4. Saugor to junction with Bhopal-Jhansi line, 43 miles.

Starting from Belaspore the line, as at present selected, runs north-nor

From the 23rd to the 30th mile the country is rough and uncultivated, and a good many nullahs have to be crossed.

From the 31st to the 40th mile the line again runs through flat rice land, and the work will be light.

On the 41st mile the Saugor nullah will have to be crossed by a bridge of three 60-feet spans. The approximate height of the line on this mile is about 1,200 feet above sea level, and the country thence rises abruptly to an elevation of about 2,000 feet at mile 55. The Mykal range which borders the Rewah plateau must be crossed at Kusumkhera, which is 300 feet lower than the adjacent hills. Kusumkhera is, however, but 7½ miles distant in a straight line

from the foot of the ascent on the 41st mile, thus necessitating a rise of 66 feet per mile.

If the contour of the hills be followed, the grade might be kept down to 1 in 100 or lighter, but this of course could be done only at the expense of extra mileage.

On this ghat ascent the work will be heavy. Some 6 spans of 60 feet are required to cross the numerous nullahs, besides smaller bridges. From the 53rd mile the work will be much lighter, rise averaging 1 in 132 for the next 8 miles till the line reaches the watershed ridge at the 61st mile.

The country now falls steadily towards Sohappore, the descent being 425 feet in about 30 miles; the grade in the first 41 miles is 1 in 150, and of the remaining portions the grades are 1 in 400 and 1 in 550.

From the 63rd to the 76th mile the line will run along the watershed between the Tipan and Alan rivers, and the work will be very light.

In the 77th mile the line crosses the Tipan just above its junction with the Alan. It continues on the north-east bank of the Tipan to the 92nd mile, where it re-crosses that river by a bridge of 6 spans of 60 feet on good rock foundation. This line involves less bridging than one keeping on the south-west bank of the Tipan crossing the Alan on the 76th mile, as there are many nullahs running down from the hills on the west. From the 93rd mile on to near Sohagpore (120 miles) the country is slightly undulating and rather less cultivated. On the 110th mile the Serpa river requires a bridge of four 60 feet spans on excellent foundations.

The stations proposed for this length are-

The major bridging for this 120 miles of line is expected to consist of-

25 spans 60 feet. 14 ,, 40 ,, 4 ,, 30 ,, 8 ,, 20 ,,

The minor bridging has not been estimated in detail, but it will probably be heavy compared with other items of construction.

Almost directly after leaving Schagpore the line will cross the Moorna Section II.

Schagpore to Katul. Length, 76} miles.

Spans of 20 feet. At 12½ miles from Schagpore the crest of the Moorcha Pass is reached. The descent for 3½ miles will not exceed 1 in 123, and in no part does it appear probable that it need be greater than 1 in 100. Fairly easy curves are obtainable, and the average bank and cutting through the Pass may be taken at 6 feet.

[•] These stations would not at first be used, but would be opened by degrees as the traffic increased.

From the 16th to the 20th mile at Pali there is swampy ground. The average height of bank over this may be taken at 4 feet. And the major bridging will include 2 spans of 40 and 3 of 20 feet.

From the 20th to the 32nd mile (Karheli) not more than 12 feet of bank is needed, except at the approaches to culverts. For the next 6 miles the line passes over practically level plain to Kalesar (381), the first half being covered with jungle, and the second being rich black cotton soil. The bank will average some 2 feet only. The first stream met with is the Johilla river, requiring at least 5 spans of 60 feet each; its bed is stony and firm.

A coal-field prospected by Mr. Hughes, of the Geological Survey Department in 1882, lies near this river, and to work it, it would seem desirable to construct a branch line 3 miles long leaving the main line on the west bank of the Johilla. A short distance beyond the Johilla the line has also to cross the Goorchatt nullah (three 60-feet spans) and further on the Dongahar nullah by one 40 feet span.

Around the villages Umaria and Kalesar lies another valuable coalfield, which might readily be opened out as soon as this Railway is constructed.

From the 40th to the 43rd mile the country is very rough, and an average of 8 feet of bank or cutting is provided for, and two nullahs have to be crossed probably by bridges of 3 spans 40 and 1 span 60 feet.

From 43rd to 53rd mile there is a tolerably even plain, with a falling grade of 1 in 211, requiring no major bridges and but two feet of bank on the average.

At the 53rd mile the Mahanuddi is reached, and a very good crossing for * this large river has been found.

Beyond the Mahanuddi the line passes out of the Rewah State, and continues descending with a low bank and only three or four small bridges (40 feet span) to Rupondh, where there is good ground for a crossing station on the 64th mile.

Another 13 miles and Katni on the East Indian Railway is reached, the last length entailing only light bank, from 1 to 3 feet high, and 5 bridges varying from 30 to 120 feet of waterway apiece in small spans.

The junction with the East Indian Railway is at the south-east end of the present station, and will be by a curve of 1,850 feet radius.

It is proposed to place stations at the following sites on this section-

					At mile
	Ghoongootee	1 4 4		***	91

The total major bridging on the length from Sohagpore to Katni is taken

3 spans of 95 feet. 60 ,, 53 40 16 20

Katni is left with a curve of 1 mile Section III. radius on a falling gradient of 1 in 350; Katni to Saugor. Length, 118 miles. on the second mile the Katni river must Height above mean sea level, 1,200 feet. be crossed by a bridge of 5 spans of 40 feet. Running on north-west the

[·] These stations will not at first be required.

5th mile.

watershed between the confluents of the Son and the Ken rivers is reached in the The line then descends past Choonchta through a gap in the

Ameerpat ridge, and turns due west to the

Koondoo at 73 miles. This bridge will be 4 spans of 40 feet. At 84 miles the line passes closely to the north of the village of Hardua.

From 91 to 121 miles spurs of the Bharair range are crossed, involving light rock cuttings, the material of which will serve admirably for bridging.

At the 19th mile the summit level between the Aloonee and Patna rivers

1,420 feet.

is reached. The line then passes on between Umeria and Mohas south of Bhartolla. At 274 miles the Bhooraina nul-

1,310 feet.

lah requires 1 span of 60 feet. At 28 miles the line reaches the Patna river, which will be crossed by three spans of 60

The line now enters the Native State of Pannah at 291 miles, and rises easily at 31 miles to the summit level between 1,430 feet. the Patna and Padri rivers, descending to cross the Basata branch of the former at 32‡ miles (1 span 60 feet). At 34½ miles the crest of the Bharair range is reached, 1,410 feet above mean sea level. Changing its direction from almost due west to almost due south, the line must here glaut sharply down the west slope of the range into the valley of the Padri. A drop of 360 feet in 7½ miles (average 1 in 110). The Pannah State is left and the Damoh district of the Central Provinces is entered at Jamoon Chowk at 38 miles.

The 71 miles from 311 to 41 are the critical parts of the whole section, and it is possible that an alternative alignwork on the line as now proposed will be very heavy, involving 10 feet average cutting, mostly in sandstone boulders and rock, crossing six ravines, of which two have beds 70 and 140 feet respectively below formation level.

From Jamoon Chowk the line will continue falling with a gradient of 1 in 100, but with easy curves along the spur, to a low gap or saddle therein near 394 miles, where a short embankment of 57 feet maximum at 30 feet average depth will be required.

The ghaut incline ceases north of Mopans at 41 miles. At 41% miles the line arrives at the Padri river (3 spans 1,050 feet. 40 feet). The line passes on north of Patna, Koomharee and Padri to an obvious 1,160 feet. tic point at 45 miles, at a saddle in ridge

between the Padri river and Chapoor Branch.

At 46% miles the head of a short ghaut is turned, the line continuing at the ruling gradient and curve down a ravine to Deoree Choti at 48 miles, in order to overcome an abrupt and unavoidable drop of 120 feet in the country in immediate descent to the east bank of the Bearmi river. This ghaut will involve about \(\frac{1}{2} \) a mile of rock cutting and ravine work, about 10 feet on an average. From Decree Choti the line runs south-westerly, and arrives at 493 at the Sej nullah, requiring two spans of 40 feet. It then passes south of Guriya and along a narrow gorge of the Bearmi river, crossing the Raxa nullah at 511 miles (north of Ghutera), whence it curves westerly and crosses, at 521 miles, the

Bearmi river, the lowest point in the whole line (1,040) at a capital bridge site requir-1,040 feet.

ing 15 spans of 60 feet.

It now runs up easily through a low saddle at 551 miles near Bandee, then on south of Bilthura to north of Bamhor-Goonjee at 58th mile, where the Saugor black soil plains commence. At 66 miles Damoh is reached, and the line runs on over easy but monotonously undulating fertile black soil plains north of Hirdapur and Khoorassa, and south of Puduria, and at 723 miles a bridge of 1 span 40 feet is needed.

At 74 miles the line crosses the Dansob-Gurhahatta-Saugor Provincial road,

1.150 feet.

1.250 feet.

1,170 feet.

just north of Bansa Tarkhera, and 1 mile farther on it crosses the Koopra river by 6 spans of 60 feet on hard shale and sand-stone. At 80% miles the summit level between Damoh and the Sunar river is reached. At 61 it crosses the Sunar river

just south of the town of Belyee, where 9 spans of 60 feet are wanted.

At $88\frac{1}{3}$ and $89\frac{1}{4}$ nullahs are crossed, 50 feet of waterway each.

From the latter there is a long steady rise in the country, the line working up north of Chunnowa, and south of Burpani, with easy curves and by no means heavy work, along a long spur north of the Gudhari to 95 miles, where there is

a saddle in the range running from the south-east of Abchand to Shahpur. 1,420 foot.

The line continues on to another saddle at 100% miles in the ridge between the Sunar and its tributary the Beas. The latter river is crossed at 1022 miles 1.610 feet.

by 6 spans of 60 feet.

Another saddle is run through at 108 miles north of Gumbheeria in a trap ridge, the watershed between the Beas and Dussan river. The line arrives at the Saugor Cantonment "Mall" ridge at mile 1111, the height of which is

1,780 feet. The Mall ridge must be cut through to facilitate grade and obtain headway for two cantonment roads over bridges. The line will pass south of the Saugor Church and Race Course, the Jhansi road being crossed at mile 1121, the line terminating at mile 113.

The total major bridging on this Section will probably be-

4 spans of 150 feet. 2 100

. 60 42 12 40 ,, 18

The proposed stations on this Section are-

diles.	Хаше		Remarks.
	Katni	0.00	It being compulsory to join the East Indian Railway by a shunt and not directly off the main line, accommodation due to an intermediate station is required, as well as one mile of permanent-way for sidings.
88	Hardaa		Not urgently required at the outset.
171	Richtee	***	Considered necessary at the outset, the more so as the Jokhye-Saugor road here falls in with line of proposed Railway.
273	Heerapore	914	Midway between the important towns of Burgaon and Raipura, which are 4 miles apart.
413	Mohans		One mile south of Koomharee, the principal town of the Padri valley.
62	Ghutera		Not considered urgent at the outset, though it must be eventually useful as tapping the Bearmi valley.
58	Bumpor Goonj	ee	Favorably situated in a fertile and populous valley.
66	Damoh		Head-quarters of a Civil District and a large native town.
74	Bunse		Charging of a new provincial road, and situated in a fertile and populous
86	Gurha Kotah		A large and important town in the valley of the Suner.
951			On the verge of a fertile plain.

113			The second of Civil Station, a Military Cantonment and large nativ

pages 1095 and 1096 of Supplement to the Gazette of India, dated 19th May 1883.

On leaving Saugor the line runs nearly due west for the first 8 miles rising to the crest of a spur of the Sutghur hills. It then descends into the Dussan It would then take a more northerly direction to reach a good crossing at the 22nd and 23rd mile in the ridge of hills forming the watershed between the Dussan and the Narain river, a tributary of the Betwa.

About the 30th mile the Narain has to be crossed, and continuing on over a fairly easy country, a junction would be made with the projected Railway from Bhopal to Jhansi at or near Etawah on the 43rd mile. As yet no levela have been taken along this last Section of the proposed line.

TRAFFIC.

One of the several important objects attained by constructing the proposed

Railway will be the opening up of the

Rewah coal-fields.

The most important of these, as far as is at present known, lie around Umaria-Kalesar, some 40 miles distant from Katni, at Johilla about 15 miles beyond, and in the Sohagpore basin.

When this line has been constructed, Umaria coal will probably be deliRs. 5-0-0 for cutting and raising. This is the
present rate at Warona, but the training of local
Isbour may be appeated to reduce the coat to that in
Rs. 1-6-8 freight over 40 miles at 1 pie per
Rs. 1-6-8 freight over 40 miles at 1 pie per
Rs. 1-6-8 freight over 40 miles at 1 pie per
Rs. 1-6-8 freight over 40 miles at 1 pie per
Rs. 1-6-8 freight over 40 miles at 1 pie per

At Jubbulpore its cost will be about Rs. 8-7-0 per ton, and at the junction with the Bhopal-Jhansi Railway it can be delivered at Rs. 12 per ton.

The sinking of a shaft at Umaria, and borings in other places, are in progress.

The line may in fact be regarded as essentially a "mineral" one, in addition to any other advantages it may possess. It will supply coal to the whole of any system of railways in Central India and Bundelkhund, to a portion of the future Nagpur-Bengal line, and of the East Indian and Great Indian Peninsula Railways, and probably to the greater portion of the Rajputana State Railway, and other lines to the north-west of Agra. In fact, if judiciously worked, these collieries will ensure a very heavy traffic over this Railway.

Excellent iron ore and stone lime are to be found in the neighbourhood of Katni, and in the Jubbulpore District generally.

Mr. Molesworth, the Consulting Engineer to the Government of India, thus writes on the subject:—

"The Jubbulpore District yields an inexhaustible supply of very rich hematite, containing about 68 per cent. of iron suitable for the manufacture of charcoal iron. The ore is on the surface, and may be obtained cheaply without the cost of expensive mining. It seems probable that the Rewah coal-fields, which have lately been discovered, may have an important influence on the development of an iron industry in this district. There is, no cover, in the neighbourhood, to the north-west of Jubbulpore, manganese ore containing 54 per cent. of manganese; and this would be most valuable in the event of manufactures of steel being undertaken."

The prospects of general traffic on this line are still under careful investigation, but the following information may be accepted provisionally. In addition to coal for the north and north-west, this Railway will carry in ordinary times much grain from the Central Provinces to Upper India, and its value in time of scarcity in any portion of the North-West Provinces, or of the Punjab, will be very great.

On the Bilaspore-Schagpore Section the total amount of goods carried along the route at present in both directions is said to be 30 tons daily for six months in the year only, but the pilgrims passing through towards Pooree are about 200,000 per annum,

On the second Section, it is stated, that the total traffic from the Soliappore-Umaria district to Katni does not at present average more than 300 tous per mouth.

Rice is the bulkiest of the exports from Schagpere and South Rewah generally; then oil-seeds, millets, ghee and forest produce.

The local traffic prospects on the Section from Katni to Saugor are much more cheering, a large quantity of produce that now comes to Katni direct from Pannah will doubtless take rail at Damoh, or near that place. The actual weight of goods, however, has not been estimated.

From Damoh to Saugor the country is particularly open and fertile, grain cultivation being unbroken from Damoh to the Sunar river, and from the Barapani hills to Saugor.

Construction.

Construction of the proposed broad guage line is moderate throughout the whole length, averaging Rs. 59,588 per mile, exclusive of rolling stock, for which item it is usual to add Rs. 10,000 per mile. The total estimate is 245 lakhs.

The heaviest works are in crossing the several ranges of hills, notably the Mykal range from Belaspore into the Rewah plateau; the Moorcha-l'ass in the ridge between the districts of Sohagpore and Singwara; and the Bharair range on the boundary of the Pannah State.

The large rivers that have to be crossed are but few in number, viz., the Tipan (6 of 60 feet), the Johilla (5 of 60), the Mahanuddi (3 of 95), the Patna (5 of 40 feet), the Bearmi (15 spans of 60 feet), the Koopra (6 of 60 feet), the Sunar (9 of 60), and the Dussan (3 of 100), at all of which first class foundations are met with.

Good building stone can be found within easy distance along the whole line. Kunker nodules of a variety which gives a moderately hydraulic line are found in abundance near most of the large rivers.

The stone lime of Katni is renowned and is largely exported for use even as far off as Calcutta, and it is also procurable in several other localities, but kunker lime will be mainly used for the construction of the line.

Fuel is plentful, but it is not expected that much timber fit for conversion into sleepers will be produced locally, except in the jungles of the Bhairar range, where say and teak is plentiful.

Ballast materials of first class quality can be found near the line from one end to the other:

Brick earth for tiles or soorkee is also abundant.

inated cost of construction of the proposed Belaspore-Katni-Saugor Railway with extension to function with the proposed line from Blogal to Ihansi.

REVENUE REPORT OF IRRIGATION WORKS IN SIND FOR THE YEAR 1881-82.

Nos. 185-92I., dated Simla, 9th May 1883.

RESOLUTION-By the Government of India, Public Works Department.

Read-

Letter from the Government of Bornbay. No. 68W.I.—145, dated 20th March 1883 submitting Revenue Report of the Irrigation Department in Sind for 1881-82, and Resolution of the Government of Bombay thereon.

OBSERVATIONS.—The capital expenditure during the year under review amounted to R3,95,066, and the total outlay incurred under this head up to the end of the year to R90,93,034, including direct and indirect charges. Of this amount, R23,69,777 had been expended on Productive Public Works, and R67,23,257 on other Irrigation Works for which Capital and Revenue Accounts are kept.

- 2. The gross receipts from all sources amounted to R30,44,828, being nearly 16 per cent. in excess of those for the previous year; the maintenance charges, direct and indirect, to £13,16,203; and the net revenue to £17,28,625. The net revenue from Productive Public Works returned 6 per cent., and that from other Irrigation Works for which Capital and Revenue Accounts are kept 9.15 per cent., on the total capital outlay to the end of the
- 3. The total area cultivated under the canals during the year amounted to 1,601,981 acres, being 7.3 per cent. in excess of that of the previous year, but

the assessed revenue (R34,74,351) was 18 per cent. in excess of that of 1880-81. The disproportion between the increase in the area under cultivation and the assessed revenue is partly due to an increase of revenue on "kharif" Jands, but mainly to the revision of settlements which is now going on as the old settlements fall in, and a steady increase in revenue is anticipated from this cause for many years to come.

- 4. The irrigating duty obtained from the water varied from about 35 to 65 acres per cubic foot per second, and was on the whole rather above the average of the previous year. On the Eastern Nara, on which the average duty was 64.75 acres per cubic foot per second, the duty obtained in irrigation of rice was about 50 acres, and in irrigation of "dry crops" about 120 acres per cubic foot per second.
- 5. The maintenance charges were considerably above the average of the previous five years owing to the necessity for special clearances of the canals, which had been somewhat neglected in previous years from the greater necessity for completion of flood embankments. The Superintending Engineer states that R7·28 lakhs may be considered as the nominal allowance for the proper maintenance of canals and embankments, and R2·35 lakhs for establishments, making a total of about 9½ lakhs of rupees as the ordinary annual allotment required; but this appears to be rather a narrow estimate of requirements, as the average outlay of the 5 years ending on March 31st, 1881, amounts to 11·46 lakhs of rupees. The Commissioner in Sind states that much yet remains to be done, and is confident that, if liberal grants are maintained for a few years longer, the results will be even more satisfactory than those given in the report under review.
- 6. The revenue charges are given in paragraph 6 of the Superintending Engineer's report as R2,74,070, and amount to 8.82 per cent. on the actual realisations of canal revenue, which are shown in paragraph 10 as amounting to R31,04,939. The charge seems high, unless detailed measurements and assessments are annually made of the irrigated areas.
- 7. The Government of India agrees fully with the Government of Bombay in considering that no necessity exists for making any alteration in the present method of accounting for the canal revenue, as the share of the land revenue due to the canals is fixed and duly credited to these works in the Administrative Accounts.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Government of Bombay in the Public Works Department for information.

Also, that a copy of this Resolution, of the report, and of the Resolution

Madras, Bengal, North-Western Provinces and by the Government of Bombay, be forwarded for information to the Governments noted in the margin in the Public Works Department.

Also, that a copy of this Resolution, of the report, and of the Resolution by the Government of Bombay, be forwarded to the Department of Finance and Commerce and to the Revenue and Agricultural Department for information, and to the Publisher of the Gazette of India for publication in the Gazette Supplement.

Also, that a copy of this Resolution, of the report, and of the Resolution by the Government of Bombay, be forwarded to Her Majesty's Secretary of State.

By order,

H. A. BROWNLOW, Colonel, R.E.,

Deputy Secy. to the Govt. of India.

Extract from the Proceedings of the Government of Bombay, Public Works Department,—No. 47, W. I.—104, dated 7th March 1883.

Read again-

From the Superintending Engineer for Irrigation in Sind, No. 163, dated 18th January 1883—Submitting, with his remarks, the Annual Revenue Report of the Irrigation Department in Sind for 1881-82.

Endorsement by the Commissioner in Sind, No. 413, dated 27th January 1883—Submitting the above report with his observations thereon.

RESOLUTION.—The inundation of 1881 was on the whole a favorable one, and in its results above the average.

- 2. The steady increase in the area of *kharif* cultivation, omitting years of flood, is extremely satisfactory, indicating, as it does, that the protective embankments of recent construction are being efficiently maintained, and that ruined lands are again being gradually brought under cultivation.
- 3. No increase in rabi cultivation can be looked for until the existing conditions are somewhat modified by the introduction of a certain quantity of perennial water into some of the canals which will admit of such a system being economically carried into effect.
- 4. The increase in the Irrigation revenue of over 61 lakhs of rupees on the average of the five preceding years is satisfactory proof that the revised system of assessment is already bearing fruit, and further that the additional sum expended since 1879-80 on the maintenance and repairs of canals and embankments has yielded a substantial return.
- 5. Both the Commissioner and Superintending Engineer for Irrigation in Sind agree that, as the revised system of assessment is extended throughout the province, combined with a liberal grant for canal clearances, the revenue may be expected to increase annually for some years to come.
- 6. The decrease of revenue on the Eastern Nara for the year under review is fully explained. The protective embankments are now making good progress, and the lands that have been injured by floods will soon be recovered. When complete immunity from floods can be guaranteed, the returns from all the canals under this system will rapidly increase: and the supply channel at Rohri can then be deepened sufficiently to ensure a proper rabi supply for the Mithrao and Thar canals.
- 7. The expenditure on maintenance and repairs for the whole province during 1881-82 was R10,98,941, or R1,58,233 more than in 1880-81. The result of this large additional outlay will be seen in the report for the next year 1882-83.
- 8. The normal amount required annually for the proper maintenance of the canals and embankments is said to be about R7½ lakhs, or, including establishment charges, about 9½ lakhs.
- 9. The percentage of cost of establishment in 1881-82 works out to about 24; that of expenditure on revenue to about 40; and the cost of maintenance per acre of cultivation to 13\frac{2}{3} annas.
- 10. The Superintending Engineer for Irrigation has correctly interpreted the intention of Government in the 9th paragraph of his report. Credit should be given in the accounts of all the canals for the difference of assessment on jaghir lands. The Examiner of Public Works Accounts should be requested to revise the General Abstract of Financial Results of Irrigation Works in Sind for, and up to the close of, 1881-82 accordingly.
- 11. The Commissioner concurs with the Superintending Engineer that the present arrangement of showing the Irrigation share of the consolidated rate under the head *Indirect* in the General Abstract of Financial Results of Irrigation Works is apt to mislead. Government, however, consider that there is no

necessity for any change in the form of keeping the accounts of Irrigation works in Sind which has been ordered by the Government of India.

The value of the canals as Irrigation works cannot be overlooked so long as the share of the land revenue, under the consolidated rate system, due to or dependent on the works, is properly credited in the accounts; and this share has been fixed at 90 per cent.

- 12. The Commissioner brings prominently to notice the importance of the Kashmor Bund, and the highly satisfactory way in which, under severe pressure, it stood and answered the purposes for which it was constructed. He also records his opinion that the results of all the different canals, as detailed by the Superintending Engineer, are satisfactory. For all these good results, great credit is due to Colonel LeMesurier and the Executive Engineers under his control.
- 13. Now that the embankments in Upper Sind have been completed and only require to be carefully maintained and watched during the inundation season, those in Lower Sind are being taken in hand. As regards the provision of special funds for the purpose, Government await the receipt of some definite proposals, with detailed plans and estimates, for the necessary works.
- 14. Copies of the report and of the Commissioner's endorsement, together with the observations of this Government thereon, should, as usual, be forwarded to the Government of India and the Secretary of State.

Extract from the Proceedings of the Commissioner in Sind,—No. 413, dated 27th January 1883.

Read—

Letter No. 163, dated 18th January 1883, from the Superintending Engineer for Irrigation in Sind, submitting Irrigation Revenue Report for the year 1851-82.

Submitted to Government.

- 2. This report explains fully the revenue results of the year. The inundation of 1881 was a favorable one, though at one time owing to the lowness of the river in July and August, apprehensions were entertained that the crops were likely to suffer serious loss. The timely rise of the river in September removed these fears, and as it continued high, and the canals contained water till a late date, the crops were above the average, and the Irrigation revenue was unusually large, being no less than R6,29,844 in excess of the average of the previous five years. These figures, it must be remarked, refer to assessments, not actual collections.
 - 3. This large increase is attributed by the Superintending Engineer to the introduction of the revised system of assessment, and this, there can be no question, has had a great deal to do with it: but a great deal is also due to the recultivation of lands, which had been left uncultivated, owing to the successive floods now fortunately kept out by the Kashmor and other protective embankments; and also to general causes, for, as the table in the following paragraph of the report shows, the increase has been very general all over Sind, and not confined to the parts where revised rates have been introduced. Another reason that has largely contributed to the increase has been the state of the Western Nara, one of the largest canals in the Shikarpur and Karaehi districts, which in the previous year failed very seriously, owing to the set of the river against its mouth, but which worked satisfactorily during the year. The increase in kharif cultivation has really been considerably larger than the table given in para. 3 shows, for, as Colonel LeMesurier has pointed out, kharif lands flooded, but cultivated with rabi crops in seasons of flood, have been entered under the head of kharif, because so classed at the time of settlement. The present method of recording cultivation is undoubtedly defective, but this is not the place to discuss how it can best be improved.
 - 4. The improved results described by the Superintending Engineer are also due in no small degree to the endeavours recently made to improve the canals,

and clear them more thoroughly than had been done for long, for, as the Super-intending Engineer remarks, he had been compelled in some previous years to neglect clearances in order to obtain funds for protective embankments. The increased expenditure on canals may be said to have commenced in 1879-80 when, as shown in para. 6, R6,87,162 were expended on works. In 1880-81 the expenditure rose to R7,32,956, and in 1881-82 to R5,86,044. The results are now beginning to be apparent, and a return being received which shows the wisdom of placing the canals in thorough order, and keeping them in it. Much yet remains to be done, but the Commissioner is confident that if liberal greats are continued for a few years longer, the results will be even more gratifying than those described in the present report.

- 5. The Commissioner observes that the Superintending Engineer has throughout used the figures supplied by the Examiner, Public Works Accounts, and as this is what Government has directed, the only figures it is necessary for the Commissioner to draw attention to are those which show consolidated land revenue, as given in Table VII. In this table the consolidated revenue is entered as being R37,65,471. This, unfortunately owing to a mistake, for which the Collectors of Hyderabad and Karachi—not the Examiner—are responsible, is not correct, the correct figure being R37,46.220. The difference represents the village cess levied on land revenue under Bombay Act IV of 1881 in the talukas into which revised settlements have recently been introduced. Instructions have been given to prevent a similar error in future.
- 6. The Superintending Engineer has, in paras. 14 to 16, raised the question whether the present method of classing receipts under the head of "direct" and "indirect" is suited to Sind. In other Provinces he points out "owners' rate" and "water advantage rate" are entered as indirect receipts, while water rates appear as "direct" revenue; but in Sind 90 per cent. of the consolidated revenue, which includes water rate, is entered as "indirect." The Commissioner agrees with Colonel LeMesurier that the present arrangement is misleading; but, on the other hand, the whole 90 per cent. would not, according to the system in force elsewhere, appear under the head "direct" revenue; so that, if what is desired is to have one system in all Provinces, some further change than that suggested by Colonel LeMesurier would have to be made. Whether such a change is really necessary or desirable, the Annual Report is not the place to discuss, and therefore the Commissioner will not further pursue the subject.
- 7. The Kashmor embankment, in spite of the severe test to which it was exposed, stood well, and it is highly satisfactory to find this very important work answering so admirably.
- 8. The Superintending Engineer gives, as usual, details for all the different canals: it is not necessary for the Commissioner to review these details; it may suffice to say that the results are satisfactory.
- 9. The Commissioner is glad to notice that the embankments in Lower Sind are now "being taken up as a whole." The embankments in Upper Sind may now be said to be in good order, but those in Lower Sind still leave much to be desired, and until this has been seen to, and cultivation made less risky, no large increase in revenue can be looked for. Now, too, that revenue survey operations are being rapidly pushed on in Lower Sind, every help should be afforded to cultivators: the old and very faulty lease system will cease, as the settlement is extended, and a very large increase of revenue may confidently be looked for, if only agricultural operations can be carried on in safety. In his 70th paragraph, the Superintending Engineer observes that special funds will be required for the work to be done in Lower Sind, and the Commissioner trusts that Colonel LeMesurier will bring to notice what sums are required, as he fully concurs with that officer in the opinion that there ought to be no cause of complaint of insufficient return for the outlay "as far as the whole district on both banks (of the Indus) south of Jerruck is concerned."
